

COMILLAS

UNIVERSIDAD PONTIFICIA

ICAI

ICADE

CIHS

Syllabus
2026 - 2027

GENERAL INFORMATION

Data of the subject	
Subject name	Electric power systems
Subject code	MEPI-512
Mainprogram	Máster Universitario en Sector Eléctrico / the Electric Power Industry por la Universidad Pontificia Comillas [MEPI 13 RD2007]
Involved programs	Master in the Electric Power Industry [First year]
Level	Posgrado Oficial Master
Quarter	Semestral
Credits	6,0 ECTS
Type	Obligatoria
Department	Department of Electrical Engineering
Coordinator	Francisco Miguel Echavarren Cerezo
Schedule	monday and wednesday from 17:00 to 19:00
Office hours	Student must ask for an appointment by sending an email

Teacher Information	
Teacher	
Name	Francisco Echavarren Cerezo
Department	Department of Electrical Engineering
Office	Rey Francisco, 4 [P1.26]
EMail	Francisco.Echavarren@iit.comillas.edu
Teacher	
Name	Mohammad Rajabdorri
Department	Instituto de Investigación Tecnológica (IIT)
Office	Rey Francisco, 4 [P1.35]
EMail	mrajabdorri@comillas.edu

DESCRIPTION OF THE SUBJECT

Contextualization of the subject
Prerequisites
Linear algebra and calculus.

Course contents

Contents
Part I: Introduction to Power Systems
Chapter 1. Physical and Functional Structure of Electric Power Systems
1. Demand 2. Generation 3. Transmission and Distribution 4. Market Operation and System Operation 5. Retailing
Chapter 2. Functional Description of Electric Power Systems
1. Time Scales 2. Expansion Planning 3. Operation Planning 4. Operation 5. Supervision and Control 6. Protection
Chapter 3. Future Trends
1. New Transmission and Distribution Technologies 2. Integration of Renewable Energy Sources 3. Smart Grids
Chapter 4. Power System Basic Analysis Tools
1. DC Circuits Review 2. Single-phase AC Circuits Review 3. Three-phase AC Systems 4. Per unit magnitudes
Part II: Technical analysis of power systems
Chapter 5. Frequency control
1. Principles of control systems 2. Principles of frequency control 3. Primary regulation 4. Secondary and tertiary regulation
Chapter 6. Voltage control
1. Principles of voltage control 2. Voltage control of transmission lines 3. Voltage control by generator excitation 4. Voltage control by ULTC transformers

Chapter 7. Power flow

1. Models of power system components
2. Network model
3. Formulation of power flow problem
4. Solution by Newton's method
5. DC power flow
6. Contingency analysis by DC power flow
7. Optimal power flow

Laboratory session # 1. Frequency control

Load regulation. Primary regulation. Secondary regulation.

Laboratory session # 2. Voltage control

Voltage control of a synchronous generator at open circuit. Voltage control of a synchronous generator connected to an infinite grid by excitation control and by transformer tap control.

Laboratory session # 3. Power flow

AC power flow data structure and solution. Generator voltage control. Contingency analysis. Optimal power flow.

EVALUATION AND CRITERIA

The use of AI to produce full assignments or substantial parts thereof, without proper citation of the source or tool used, or without explicit permission in the assignment instructions, will be considered plagiarism and therefore subject to the University's General Regulations.

Evaluation activities	Evaluation criteria	Weight
The exams are a combination of a multi-option test and problems.	The weighted grade of the exams must be greater or equal to 5.	90
There are 3 assignments that the students can be done in groups following the instructions of the professor.	Assignments will be evaluated by discussing with the professor the student reports through an interview.	10

Grading

REGULAR ASSESSMENT

The theory will account for 90% of the grade, of which:

- 1st Exam: Power system structure & functional description up to medium-term decisions (13/60)
- 2nd Exam: Functional description & DC-AC circuits & Three Phase Systems (13/60)

- 3rd Exam: Frequency control (10/60)
- 4th Exam: Voltage control (14/60)
- 5th Exam: Power flow (10/60)

The weighted grade of the exams must be greater than or equal to 5.

The exams are a combination of a multiple-choice test and problems.

Assignment evaluation will account for the remaining 10%. There are 3 assignments that the students can do in groups, following the instructions of the professor: frequency control, voltage control, and power flow. Assignments will be evaluated by discussing with the professor the student's reports through an interview.

RETAKE

A single retake final exam will account for 90% of the grade.

The grade of the exam must be greater than or equal to 5.

Assignment evaluation carried out in the regular assessment will account for the remaining 10%.

COURSE RULES

Class attendance is mandatory according to Article 93 of the General Regulations (*Reglamento General*) of Comillas Pontifical University and Article 6 of the Academic Rules (*Normas Académicas*) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences:

- Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period.
- Regarding the laboratory, absence from more than 15% of the sessions can result in losing the right to take the final exam of the regular assessment period and the retake. Missed sessions must be made up for credit.

Students who commit an irregularity in any graded activity will receive a mark of zero in the activity, and disciplinary procedure will follow (cf. Article 168 of the General Regulations (*Reglamento General*) of Comillas Pontifical University).

AI cannot be used in any exam or intermediate assessment test.

The use of AI to produce full assignments or substantial parts thereof, without proper citation of the source or tool used, or without explicit permission in the assignment instructions, will be considered plagiarism and therefore subject to the University's General Regulations

WORK PLAN AND SCHEDULE

Activities	Date of realization	Delivery date
First exam: Power system structure and functional description up to medium-term decisions	30/09/2026	30/09/2026
Second exam: Functional description and circuits (direct current, and single-phase and three-phase alternating current)	19/10/2026	19/10/2026
Third exam: Frequency control	16/11/2026	16/11/2026
Fourth exam: Voltage control	16/12/2026	16/12/2026
Fifth exam: Load flow	13/01/2027	13/01/2027
