**SPECIFIC INFORMATION OF THE COURSE**

**Course context**

**Contribution to the professional profile of the degree**

This course introduces the student to the basic concepts of the circular economy, and provides an opportunity for hands-on learning on these topics.

Classes will combine theoretical content and hands-on team work on a project. The team project will indeed be the cornerstone of the course: students will work on innovative solutions for the circular economy taking into account technical consideration and business model design.

During the course students will learn how to apply the principles of the circular economy to real cases and develop skills such as creativity, systems thinking and teamwork.

**Pre-requisites**

There are no particular prerequisites to take this course.
CONTENTS

1. The case for the circular economy: exploring global socio-environmental pressures & their connection to the linearity of our production-consumption system
2. The origins and fundamentals of the circular economy
3. Regulatory trends towards the circular economy
4. A framework to understand the circular economy
5. Circular strategies and business models with real examples
6. Biomimicry - nature as an inspiration for solutions
7. Circular lifecycle assessment
8. Ecodesign

Project work

The contents of the course will be explored at a practical level in class, working progressively in teams to develop a business model that can contribute to the circular economy. Hands-on learning, and learning from project-related discussions and interactions, thus becomes an essential part of the course.

The project also gives the students the opportunity to engage with methodologies such as design thinking and lean startup, and develop soft skills related to problem solving, creativity, systems thinking and team work.

Competences – Learning Results

Basic Competences

CG3. Knowledge of basic and technological subjects, which enables students to learn new methods and theories, and gives them versatility to adapt to new environments.

CG4. Ability to solve problems with initiative, decision, creativity, and critical reasoning; and to communicate and transfer knowledge, abilities and skills, understanding the ethical and professional responsibility.

CG7. Ability to analyze and assess the social and environmental impact of technical solutions.

CG9. Management and planning ability in business environments, or in other institutions or organizations.

CG10. Ability to work in a multilingual, multidisciplinary environment.
CFB6. Appropriate knowledge of the concept of the firm, its institutional and legal setting. Business management.

**Specific Competences**

CRI9. Basic knowledge on production and manufacturing systems.

CRI10. Basic knowledge and application of environmental and sustainability technologies.

**Learning Results**

At the end of the course the student must have achieved the following outcomes:

RA1. Understand the context, the challenges and the opportunities of the circular economy

RA2. Get insights and inspiration from real examples of the circular economy

RA3. Propose a business model for the circular economy considering technical, economic and environmental aspects

RA4. Apply tools for business model design

RA5. Engage in collaborative dynamics for team work

**TEACHING METHODOLOGY**

**Classroom Methodology: Activities**

1. **Theoretical content:** the instructor will introduce some background and relevant frameworks to understand key contents.

2. **Real cases:** key concepts will be illustrated using real-life examples and case studies, which can also become a source of inspiration for students’ projects.

3. **Tools & techniques:** the instructor will introduce some key tools and techniques from design thinking and entrepreneurship that can be useful for developing the projects: brainstorming, idea selection, business model design, etc.

4. **Hands-on learning:** we will have some guided dynamics in class to encourage students’ participation and engagement, and time for team work on the projects applying the tools and techniques explained in class.

**Non-Classroom Methodology: Activities**

5. **Individual research:** students will be encouraged to do research on their own, both to deepen the understanding of the concepts and methods discussed in class and to discover new resources, related concepts and inspiration for their projects.

6. **Team project:** students will have to work on their projects out of classroom. Team project is the cornerstone of this course: it is here where students should demonstrate their understanding of concepts and their ability to propose innovative solutions, in a process of co-creation and co-learning. The instructor will guide this process and be available for addressing the questions of students.
# EVALUATION ACTIVITIES AND CRITERIA

<table>

<tbody>
<tr>
<td>Active participation in class</td>
<td>- Questions and comments in class, and active engagement in the proposed activities</td>
<td>30%</td>
</tr>
<tr>
<td></td>
<td>- Activities’ outcomes</td>
<td></td>
</tr>
<tr>
<td>Project-related assignments</td>
<td>- Meeting the assignment</td>
<td>25%</td>
</tr>
<tr>
<td></td>
<td>- Original and critical analysis</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Evolution of ideas</td>
<td></td>
</tr>
<tr>
<td>Final project</td>
<td>- Degree to which students apply what they have learned to the analysis of a real situation</td>
<td>25%</td>
</tr>
<tr>
<td></td>
<td>- Degree of innovation of the proposed solution</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Degree of technical &amp; economic feasibility of the proposed solution</td>
<td></td>
</tr>
<tr>
<td></td>
<td>- Ability to present and communicate the solution</td>
<td></td>
</tr>
<tr>
<td>Final quizz</td>
<td>- Understanding of key concepts explained in class</td>
<td>20%</td>
</tr>
</tbody>
</table>

### Qualification Criteria

Grading will be based on:
- [ 30% ] Active participation in class
- [ 25% ] Project-related assignments
- [ 25% ] Final project
- [ 20% ] Final quizz

The following conditions must be accomplished to pass the course:
- A minimum overall grade of at least 5 over 10.

### Extraordinary session

- [ 50% ] Extraordinary exam
- [ 50% ] Revised final project
