DETAILED INFORMATION

Contextualization of the course

Contribution to the professional profile of the degree

The objective of the course is to become familiar with electric power systems' microeconomic and financial fundamentals. The concepts presented in this course will set the foundations for the proper understanding of stakeholders' decision-making process in the electricity industry.

Prerequisites

There are not prerequisites for this course. The course assumes the student is not familiar neither with microeconomics nor with financial analysis.

CONTENTS

Contents

Theory

Chapter 1. Microeconomic Analysis of the Electric Power Industry

- 1.1 Demand and supply
- 1.2 Centralized context
- 1.3 Perfect competitive markets
- 1.4 Monopoly
- 1.5 Oligopoly

Chapter 2. Financial Statements Analysis

- 2.1 Financial statements. Structure of balance sheet and income statement
- 2.2 Balance sheet analysis: assets, equity and liabilities
- 2.3 Income statement analysis: revenues & expenses
- 2.4 Cash flow statement analysis
- 2.5 Case study

Chapter 3. Costs and Return Analysis

- 3.1 Economic and Financial Return. Value Creation and Financial Leverage.
- 3.2 Economic and Financial Analysis. Ratios.
- 3.3 Generation and distribution costs. Discounted cash flow valuation.
- 3.4 Case studies.

Chapter 4. Electricity Industry Financing

- 4.1 Introduction. Objectives and financial policies.
- 4.2 Cost of Capital. Optimal financial structure
- 4.3 Financial needs and working capital management
- 4.4 Alternatives for financing. Risk analysis and risk management
- 4.5 Analysis and valuation of electricity companies by financial markets

Chapter 5. Strategy in the Electricity Sector

- 5.1 Introduction to strategy in the electric power industry
- 5.2 Business models in the electricity industry
- 5.3 Build, borrow or buy framework
- 5.4 Case presentations

Competences and Learning Outcomes

Competences

Basic Competences

CB2 Being able to apply and integrate the knowledge, the comprehensiveness of them, the scientific founding and their abilities to solve problems in new environments and defined in an imprecise manner, including multidisciplinary contexts as highly qualified researches and professionals.

Specific Competences

- CE7 Being able to transfer theoretical concepts of Microeconomics to the study and analysis of the real markets.
- CE8 Understand the accounting and financial regime of a company and know the general mechanisms for settlement of the sector. As well, to be able to realize the investment analysis in an electricity company and understand the main aspects of strategic management of the sector.

Learning outcomes

By the end of the course students should be able to:

- LO1. Understand the drivers behind demand and supply behavior.
- LO2. Understand the efficiency gains a market environment can achieve,
- LO3. Understand why the market does not always do its job. In this respect, the student will be able to identify the most relevant market failures affecting electricity markets
- LO4. Understand the most relevant financial concepts, with a particular focus on the electricity industry.
- LO5. Use some well-known techniques and methods aimed to analyze electricity companies' financial position.
- LO6. Understand the electricity company's strategy

TEACHING METHODOLOGY

General methodological aspects of the course			
Classroom Methodology: Activities	Competences		
Lectures. Description of the course contents and open discussion of concepts. The students have also to try to respond to the numerous questions posed by the instructors throughout the lecture (54 hours).	CB2, CE7, CE8		
Oral presentations . The students have to discuss with the instructors the most relevant aspects of their work (6 hours).	CB2		
Tutorial activities . Available according to the need of the student. (5 hours)	CB2, CE7, CE8		
Non-Classroom Methodology: Activities	Competences		
The classroom activity should be complemented by the individual student work performed out of class.			
Personal study. Study of the course contents (90 hours).	CB2, CE7, CE8		
Term task . The student has to apply the theoretical concepts reviewed in class on real cases (25 hours).	CB2		

GRADING

There are five blocks in the course. Each of these blocks has a different instructor and a different grading system (described below). The total grade of the course will be the weighted average of the five parts, where weights are given by each part in proportion of sessions.

In order to pass the course in the regular assessment period, it will be needed a minimum grade of 3,5 (out of 10) in each of the five parts, and an average equal or above 5.

In case that the student does not pass the course, the final grade in the regular assessment period will be the lowest of the five marks, and the student will have to retake all the blocks with less than 5 points (the grade corresponding to blocks with 5 or more points will be maintained). The total grade of the course after the retake will again be the weighted average of the five parts, where weights are given by each part in proportion of sessions.

3.1 Grading in the regular assessment period:

Block 1: Microeconomics

Evaluation activities	Evaluation Criteria	Weight
Exams (2) Exams is a combination of short questions, multi-option test and problems.	Concept understanding Application of concepts to the solution of practical problems	90 % (20 % and 70 %)
Participation in the class	- Contribution to the class discussions	10%

Block 2: Financial Statements Analysis

Evaluation activities	Evaluation Criteria	Weight
Exam Exams is a combination of short questions, multi-option test and problems.	 Concept understanding Application of concepts to the solution of practical problems 	75 %
Participation in the class	- Contribution to the class discussions	10%
 Business case Analysis of a real business case. 	- The term task will be evaluated based on the quality of the analysis and the application of the concepts introduced in class.	15%

Block 3: Cost and Return Analysis

Evaluation activities	Evaluation Criteria	Weight
-----------------------	---------------------	--------

Exam Exams is a combination of short questions and multi-option test.	Concept understandingApplication of concepts to the solution of practical problems				90 %
Participation in the class	- Contribution discussions	to	the	class	10%

Block 4: Electricity Industry Financing

Evaluation activities	Evaluation Criteria	Weight
Exam Exams is a combination of short questions, multi-option test and problems.	 Concept understanding Application of concepts to the solution of practical problems 	90 %
Participation in the class	- Contribution to the class discussions	10%

Block 5: Strategy in the Electricity Sector

Evaluation activities	Evaluation Criteria	Weight
Participation in the class	- Contribution to the class discussions	40%
<u>Exam</u>	The final case presentation will be evaluated from two points of view:	60%
	- The quality of the analysis itself, the clarity and comprehensiveness of the assessment.	
	- The oral presentation of the work, the way the students build up their discussions and their ability to back their proposals and to respond to the questions received.	

3.2 Retake

Retakes

In case the student does not pass the course in the regular period, she/he will have to retake all blocks with an individual grade below 5 points. The dates of the retake evaluation period will be

announced in the web page. The grading system of each block in the retake are those described below.

Each of the five chapters (parts) will have the following grading system in the corresponding retake:

- Block 1 (Microeconomics): exam (100%)
- Block 2 (Financial Statements Analysis): exam (100%)
- Block 3 (Cost and Return Analysis): exam (100%)
- Block 4 (Electricity Industry Financing): exam (100 %)
- Block 5 (Strategy): case presentation (100 %).

In order to pass the course it will be needed a minimum grade of 3,5 (out of 10) in each of the five parts. As in the regular assessment period, in order to pass the course, the average mark must be at least 5 out of 10 points (the grade corresponding to the blocks with 5 or more points in the regular period will be maintained to compute the average). Otherwise, the final grade will be the lowest of the five marks.

WORK PLAN AND SCHEDULE¹

Content
Introduction to the course - Introduction to Microeconomics
Demand and supply (i)
Financial statements. Structure of balance sheet and income statement.
Balance sheet analysis: assets, equity and liabilities
Demand and supply (ii)
Economics in the centralized context (i)
Income statement analysis: revenues & expenses
Cash flow statement analysis
Economics in the centralized context (ii)
Perfect competitive markets (i) and test
Case study (1)
Case study (2) and test
Perfect competitive markets (ii)
Monopoly and oligopoly (i) and test
Economic and Financial Return. Value Creation and Financial Leverage.
Economic and Financial Analysis. Ratios.
Generation and distribution costs. Discounted cash flow valuation.
Case studies.
Intro. Objectives and financial policies
Cost of Capital. Optimal financial structure
Financial needs and working capital management
Alternatives for financing. Risk analysis and risk management (1/2)
Risk analysis and risk management (2/2). Project financing and non-recourse debt
Analysis and valuation of electricity companies by financial markets
Introduction to strategy in the electric power industry

¹ A detailed work plan of the subject can be found in the course summary sheet (see the last pages).

26	Business models in the electricity industry
27	Build, borrow or buy (I)
28	Build, borrow or buy (II)
29	Strategy in the electric power industry
30	Case presentations

SCHEDULE

SUMMARY OF WORKING HOURS OF THE STUDENT								
	CLASSROOM HOURS							
Lectures	Oral presentations							
54	6							
	NON-CLASSE	ROOM HOURS						
Personal study	Personal work in case studies	Tutoring						
95	25	5						
	ECTS CRÉDITS: 6 (180 hours)
