

COURSE GUIDE

Course Data	
Name	Business Economics
Code	DOI-GITT-322
Degree	Grado en Ingeniería en Tecnologías de Telecomunicación
Year	3º
Semester	2º
ECTS Credits	4.5 ECTS
Type	Elective
Department	Industrial Engineering
Area	Economics and Business Administration
Coordinator	Pedro Linares

Information of Professors	
Professor	
Name	Pedro Linares Llamas
Department	Industrial Engineering
Area	
Office	IIT – Santa Cruz de Marcenado 26
e-mail	pedro.linares@comillas.edu
Telephone	91 5406257
Tutoring hours	Check the professor's website (www.comillas.edu/personal/pedrol)

SPECIFIC INFORMATION OF THE COURSE

Course context	
Contribution to the professional profile of the degree	
<p>This course introduces the student to the basic concepts of economic theory, financial and cost accounting, developing further those aspects more relevant to industrial engineering. The course is therefore introductory, presenting the fundamental topics of economics, finance and cost accounting which can be later developed at the Masters level.</p> <p>During the course students will learn how to understand and solve microeconomics problems, to produce financial statements, and to determine the production cost of firms.</p>	
Pre-requirements	
Basic knowledge of algebra and calculus	

CONTENTS

Contents
MODULE 1: Basic concepts
1: SCARCITY AND CHOICE.
<ul style="list-style-type: none"> 1.1. The problem of scarcity 1.2. The problem of choice: what, how and for whom to produce 1.3. Choice mechanisms: markets, governments, mixed economies 1.4. Difficult choices: market failures and government failures 1.5. Economic science: micro vs macro; theory vs reality
MODULE 2: Microeconomics
2: SUPPLY AND DEMAND
<ul style="list-style-type: none"> 2.1. The market: Participants and interactions 2.2. Demand: individual and market demand, determinants, shifts and movements 2.3. Supply: individual and market supply, determinants, shifts and movements 2.4. Equilibrium, surplus and shortages 2.5. Changes in equilibrium: price ceilings and floors
3: CONSUMER DEMAND
<ul style="list-style-type: none"> 3.1. The demand curve and utility theory 3.2. Price elasticity and its determinants
4: SUPPLY DECISIONS
<ul style="list-style-type: none"> 4.1. The production function 4.2. Costs of production 4.3. Supply horizons: short and long term 4.4. Economic vs accounting costs
5: THE MARKET (I): PERFECT COMPETITION
<ul style="list-style-type: none"> 5.1. Market structure 5.2. Perfect competition 5.3. The firm's production decision 5.4. Profit maximization 5.5. Supply behavior: individual and market 5.6. Industry entry and exit
6. THE MARKET (II): IMPERFECT COMPETITION
<ul style="list-style-type: none"> 6.1. Monopoly: structure, behavior, barriers to entry 6.2. Other non-competitive markets: duopoly, oligopoly, monopolistic competition 6.3. Reasons for market power: R&D, economies of scale, natural monopoly, contestable markets
7. MARKET FAILURES
<ul style="list-style-type: none"> 7.1. Market failures 7.2. Public goods 7.3. Externalities 7.4. Market power 7.5. Inequity 7.6. Macro instability

MODULE 3: Financial accounting
8: FINANCIAL ACCOUNTING
<ul style="list-style-type: none"> 8.2 The firm as an economic agent. 8.3 Roles of the firm. 8.4 Types of firm. 8.5 Legal framework. 8.6 Organization of the firm. 8.7 Nature and purpose. Rules and regulations 8.8 Recording data: The accounting equation. Accounts. Bookkeeping. Double entry 8.9 Basic financial reporting. Regularization: inventories, depreciation, accruals, value correction
MODULE 4: Management accounting
9: MANAGEMENT ACCOUNTING
<ul style="list-style-type: none"> 9.1 Nature and purpose. Classification of costs 9.2 Direct costs. Materials. Labor. Other direct costs 9.3 Indirect costs. Product and period indirect cost (criteria and accrual systems). Activity-based costs (ABC) 9.4 Margin of safety. Fixed and variable costs. Break-even point.

TEACHING METHODOLOGY

General methodological aspects of the course
In order to achieve the learning objectives stated above, the course will focus on the students' activity and on their active learning. Therefore, the methodology will be oriented towards a more active role of the student.
Classroom Methodology: Activities
<ul style="list-style-type: none"> 1. Lectures: the instructor will start from the description of a real situation in which an economic or accounting problem is present. This situation may be introduced by the instructor or proposed by the students. Then the situation will be discussed, and the economic concepts and tools required to address it will be introduced and explained. This will help students learn to identify the basic elements of an economic or accounting issue, how to analyze it, and how to solve it. 2. Problem solving / Case discussion: In these sessions tasks previously given to students (problems and case studies) will be discussed, solved and explained. In order to participate in these sessions the student must hand in previously the task
Non-Classroom Methodology: Activities
The objective of non-classroom activities is to understand the concepts and methodologies described in class, and to apply them to the different problems or case studies presented in the classroom or given by the instructor.
<ul style="list-style-type: none"> 1. Individual and group study of the concepts, methodologies and techniques learnt during the lectures 2. Problem solving 3. Case analysis and preparation
In addition, instructors will address the questions of students individually or in groups during their office hours, and will also help them orient their learning process

EVALUATION ACTIVITIES AND CRITERIA

Evaluation activities	Evaluation Criteria	Weight Percentage
Tests: <ul style="list-style-type: none"> • Test 1(week 4) • Test 2(week 8) • Test 3(week 12) • Test 4 (week 15) • Final exam 	<ul style="list-style-type: none"> - Understanding of concepts. - Application of concepts to problem solving. - Analysis and interpretation of problem results. - Quality of writing and overall presentation. 	70% (12.5% each intermediate test, 20% final exam)
<p>To be allowed to do the final exam, students must get at least 3.5 in at least two of the intermediate tests.</p> <p>To pass the final exam they must get at least 3 in all of the modules (Microeconomics, Financial Accounting, and Management Accounting. The minimum grade to pass the final exam is 5.</p> <p>Programmable calculators are not allowed in any of the tests or quizzes</p> <p>Cell phones, tablets or cameras are not allowed when reviewing tests.</p>		
Problems and case studies given for out-of-classroom work	- Handing them in before the corresponding session	10%
Active participation in class	- Questions and comments in class	10%
Short video analyzing a real microeconomic problem, chosen by the student	- Degree to which students apply what they have learned to the analysis of a real situation	10%

Qualification Criteria

The final grade of the course will result from adding the following elements:

- 70% from the grade in the tests and final exam. Each intermediate test will represent 12.5% of the final grade, and the final exam will weigh 20%. PROGRAMMABLE CALCULATORS ARE NOT ALLOWED IN INTERMEDIATE TESTS OR FINAL EXAMS.
- 10% from handing in the problem sets and case studies given for out-of-classroom work.
- 10% from the grade corresponding to participation in class.
- 10% from the grade corresponding to the short video to be prepared.

Extraordinary session

The same criteria and weights are valid for the extraordinary session, except that the grade of the final exam will be replaced by the grade in the extraordinary exam.

Missing more than 15% of the classes may result in the student not being able to take the final exam in its first session.

WORK PLAN AND SCHEDULE¹

In and out-of-class activities	Date/Periodicity	Deadline
• Reading and study of the materials, problem solving	After each session	
• Problem solving	Weekly	Weekly
• Tests and final exam preparation	Weeks 4, 8, 12, and 15	
• Short video of a microeconomic problem		Week 11

SUMMARY OF WORKING HOURS OF THE STUDENT			
CLASSROOM HOURS			
Lectures	Problem solving	Tests	
35	10	4	
NON-CLASSROOM HOURS			
Autonomous work – theory	Autonomous work – problems	Test preparation	
45	30	11	
ECTS CRÉDITS:			4.5 (135 hours)

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the rhythm of the class.
