INDEX

FOREWORD	15
PART ONE: GOVERNANCE	23
ALTERNATIVE DISPUTE RESOLUTION MECHANISMS (AS PART OF THE ALASTRIA GOVERNANCE) - ISMAEL ARRIBAS	25
I. Introduction	25
II. Definitions and characterization of ADR solutions in the permissioned blockchain context	26
III. The fundamentals of arbitration as an optimal solution in the per- missioned-blockchain governance context.....	27
IV. A proposal for Alastria	29
1. Specimen of inception	29
2. Components.....	30
3. Minimal common legal requirements	31
4. Challenges and recommendations for Alastria	32
5. Case of use: wine plantations	33
V. References	34
ALASTRIA AS A CASE OF INTERNET GOVERNANCE - MOISÉS BARRIO ANDRÉS.....	35
I. Introduction	35
II. From technical governance to social governance	38
2.1. ICANN’s creation	39
2.2. The creation of the Internet Governance Forum (IGF)	41
2.3. ICANN’s globalisation.....	42
III. Concluding remarks: lessons from cyberlaw for Alastria’s governance	44

VALIDATION AND GOVERNANCE IN AN ALASTRIAN TESTNET NODE - DAVID CONTRERAS, JOSÉ LUIS GAHETE, ISRAEL ALONSO, AND DAVID ALFAYA	47
I. Introduction to Alastria architecture	47
1. Quorum consensus protocol.....	48
2. Transactions.....	50
II. Alastria members and nodes.....	52
1. Alastria Nodes Requirements.....	52
2. Alastria Nodes Configuration	53
III. Alastria Operation	56
1. Regular introspection	56
2. Network analysis.....	57
3. Results.....	57
IV. Conclusions and future works	60
ALASTRIA GOVERNANCE POLICIES AND ETHICS - JAVIER IBÁÑEZ JIMÉNEZ	61
I. Introduction	61
1. The relationship between agency problems, conflicts of interest and ethics from a general and legal societal perspective	62
II. Ethics beyond governance organization in DLT permissioned net- works.....	63
III. The case of Alastria: conflicts of interest, implemented controls and alternative solutions in accordance with an ethical acceptable con- sensus.....	67
1. The bylaws of Consorcio Red Alastria, a private-law associa- tion	67
2. Conflicts of interest and related policies	68
3. Ethical code of the association	69
IV. Specific components of governance in the Alastria model: agency problems in Alastria as a DLT associative consortium and node com- munity for the development of a permissioned blockchains	71
1. Authority of nodes and transaction validation in Alastria.....	71
2. Conflicts of interest in the Alastria on-chain governance	74
3. Off-chain governance and agency problems in the Alastria model, and their meta-juridical or extralegal ethical and social projec- tion	76
REWARDING HONEST VALIDATORS IN ALASTRIA - PIETRO MARCHIONNI.....	81
I. Introduction: consensus among nodes in DLT	81
1. Consensus algorithm in Alastria: fault tolerance and node voting.....	81

2. The need to define a rewarding system for validating activity in a permissioned network	82
3. Objectives.....	82
II. Alastria rewarding model.....	82
1. The optimal characteristics of a validator node as a prerequisite to set the optimal rewarding model	83
2. Alastria Rewarding Measure Algorithm	84
2.1. <i>Key building elements</i>	84
2.2. <i>ARM formula</i>	86
2.3. <i>ARM calculation and simulation</i>	86
2.4. <i>Alastria Rewarding Measure strategy and marketing</i>	87
THE VALUE OF LEADERSHIP IN ALASTRIA GOVERNANCE - SALVATORE MOCCIA	89
I. Leadership as a matter of research	89
II. Analysis: the evolution of leadership standards and conception	90
III. Alastria governance seen from the entrepreneurial leadership view-point.....	92
IV. Conclusion	95
V. References.....	95
PART TWO: DIGITAL IDENTITY	97
THE CONCEPTUAL LEGAL FRAMEWORK OF ALASTRIA IDENTITY - IGNACIO ALAMILLO DOMINGO AND JULIÁN VALERO TORRIJOS	99
I. Contents.....	99
II. The convenience of a conceptual legal framework for the Alastria self-sovereign identity initiative	100
1. The alignment of the Alastria identity with the regulatory framework for the usage of identification systems by the national public sector bodies.....	100
2. The influence of the interoperability framework for cross-border electronic identification in the European Union: the eIDAS Regulation	103
3. The convenience of offering support for compliance with the formal identification obligations contained in anti-money laundering regulations	110
III. Guidance for the Alastria trust framework and identity interoperability agreements	111
IV. References.....	112

CHARACTERIZATION AND IMPORTANCE OF CYBER-IDENTITY IN PERMISSIONED NETWORKS - ELENA DAVARA FERNÁNDEZ DE MARCOS	115
I. Introduction to the concepts of cyber-identity and permissioned inter- net networks	115
1. Cyber-identity as a digital personal identity.....	115
2. Permissioned networks	116
II. Data security and vulnerabilities: the need of effectiveness in regu- latory implementations, and the role of blockchain within this con- text	117
1. The role of the DLT	118
2. Introductory GDPR issues	119
2.1. Profiles	119
2.2. Biometric data	120
3. Self-sovereign identity in the DLT context	122
4. A word on the Alastria self-sovereign identity.....	123
THE VALUE OF ALASTRIA IDENTITY FOR PUBLIC ADMINISTRA- TIONS - PEDRO MARTÍN JURADO	125
I. Blockchain and improvement of efficiency in Public Administrations	125
II. The digital identification of citizens and the functions of public administrations.....	126
1. Self-sovereign identity in the relations between public adminis- trations and citizens	127
2. The European Self-Sovereign Identity Framework	128
3. Some issues on the accreditation of European citizens, and the initiatives of the European Commission.....	130
4. Reference to the Alastria network within the current public permissioned Blockchain identity context.....	131
PART THREE: SUPERSTRUCTURES	133
SMART CONTRACTS AND DECENTRALIZED APPLICATIONS IN ALASTRIA: THE CASE OF SPANISH WINE - M. AYMO, C. BELLÓN, AND R. SÁENZ-DÍAZ.....	135
I. Idea in brief.....	136
II. Introduction.....	136
III. The wine industry in Spain	138
IV. Use case: exporting Rioja wine. Situation today	140
1. The Alastria Wine Solution.....	142
2. Supply Chain Management Issues.....	143

3. Alpha version of the Alastria Wine Solution. Application to Rioja wine exports	144
V. Conclusions for all stakeholders.....	149
THE USE OF SMART CONTRACTS FOR PUBLIC TENDERS IN THE REGIÓN OF ARAGÓN (SPAIN) - M. A. BERNAL BLAY	151
I. Blockchain for the public sector.....	151
II. A distributed ledger for offers in public procurement	152
1. Context and initial objective	153
2. Smart contracts for the evaluation of the offers	154
III. Some tips about the project: the public procurement of innovation	154
IV. Other use cases	156
ACCOUNTING AND NON-FINANCIAL FIRM DATA TOKENS IN ALASTRIA - E. M. IBÁÑEZ.....	157
I. A word on tokens as a historic source of accountancy registration and record of transactions	157
II. DLT Utility in accountancy	158
III. the digital audit of accounting information in public permissioned networks	163
1. Stakeholder integration and benefits in public permissioned blockchains by audit smart contracts: a preliminary consideration	165
2. A sample of registered auditable transaction in the Alastria permissioned blockchain.....	166
IV. Preliminary findings	167
V. References.....	168
PRIMARY AND SECONDARY MARKET TOKENS IN ALASTRIA: THE CASE OF OLIVE OIL TOKENS - ANTONIO PARTAL UREÑA.....	171
I. Blockchain and Alastria market utilities.....	171
II. A word on market tokenization	172
III. A project for olive oil tokens on the Alastria T Network.....	173
1. Traceability functions.....	174
2.The olive oil token market	177
IV. Conclusion	182
PART FOUR: PROOFS OF CONCEPT	183
ALASTRIA SMART CONTRACTS FOR THE WOMEN STARTUP COMMUNITY (WSC) - TERESA ALARCOS TAMAYO.....	185
I. The Women Startup Community (WSC) and the feminine talent in the digital era, and the transformation of entrepreneurship	185

I. Robots and civil liability within a DLT or blockchain operative context: a preliminary approach	273
1. A civil personality for robots	274
2. A strict liability system	278
II. Alastria Blockchain and Smart Contract	280

FOREWORD

The objective of this research is the study of the case of Alastria as a blockchain national ecosystem from the standpoint of relevant aspects for multidisciplinary research.

Created in September of 2017, Alastria is the first worldwide ecosystem designed to create public permissioned DLT systems.

The researchers participating herein were appointed in December of 2018 as a response to a call for papers from the Alastria CITT (Comisión de Investigación y Transferencia Tecnológica) to the Spanish blockchain research community present in Alastria, composed by universities, research centres, Consorcio Red Alastria associated enterprise members, and researchers rendering service in public sector institutions.

Thus, Alastria CITT opened a nation-wide call for research to cover different legal, economic and technological/engineering aspects concerned by the consortium, legally constituted as a Spanish private-law association named Consorcio Red Alastria.

The primary research contents programmed to develop this work were designed to cover the following topics concerning Alastria ecosystem and DLT networks:

1. Governance, encompassing administration of DLT networks and management and ruling of Alastria networks, particularly in the realm of on-chain and off-chain rules.
2. Self-sovereign digital identity (SSI) and specifications of the Alastria SSI system in progress.

3. Superstructures on upper architecture layers, namely smart contracts, tokens and decentralized applications.
4. Cases and proofs of concepts concerning DLT-registered data notarization, verification and certification.
5. Civil liability issues concerning management and administration of the public decentralized networks.

Research area managers were appointed on 20th January of 2019, and they started planning the research areas. Successive task developments took place between January and June of 2019. Despite the initial prevision of delivering and final conclusions of researchers by the end of June, the reform of the Consorcio Red Alastria association opened an inner period of reflection led by the organs of the consortium (mainly, its board of directors and core managing teams, together with concerned committees and commissions), resulting in the impossibility of the scheduled public presentation of the research conclusions in Autumn. Until the end of 2019, the complexity and deepness of the reform of Alastria bylaws and articles of association, together with newly issued self-regulations (guidelines and policies for governance, summarizing) recommended the revision of the ongoing research.

The tasks restarted in February of 2020, concluding by the end of April. By that time, definitive versions were delivered and final general conclusion were obtained. Public presentations will presumably be replaced by private website presentations, as the COVID 19 crisis delays ordinary presential activity in many affected countries, not only in Spain. Communication among members will surely be enhanced by online channels, fostering Alastria reports and other communication tools for the optimal spreading of research program conclusions, enabling Alastria member organizations to perform an adequate interaction on relevant debates concerning the researched matters¹. In accordance

¹ The list of appointed researches as of May 26th of 2019, conveniently bundled and clustered by research matters, was composed as follows:

1. ALASTRIA GOVERNANCE

Alfaya, D. (ICAI Telematics and Computer Sciece Dept, UP Comillas)
Alonso, Israel (ICAI Telematics and Computer Sciece Dept, UPComillas)
Arribas, Ismael (Alastria Standards Committe / ISO-ETSI-ITU member)
Barrio, Moisés (Consejo de Estado, Spain / UPC FinTech Observatory)
Contreras, David (ICAI Comillas Blockchain node –Madrid)

with the academic preferences, research skills and organization of competent departments in the concerned universities and research centers, the scheduled distribution of tasks was configured as follows:

Gahete, José Luis (ICAI Comillas Blockchain node –Madrid-)
Ibáñez, Javier (Alastria Board and Legal&CITT Committee / UPC FinTech Observatory)
Marchionni, Pietro (CEN-CENELEC Blockchain FG/ Agenzia per l’Italia Digitale)
Ruiz, Jesús (Alastria Chief of Technological Research)

2. ALASTRIA SSI IDENTITY

Alamillo, Ignacio (Murcia University/Alastria DI Committee working group)
Davara, Elena (Davara & Asociados/UP Comillas FinTech Observatory)
Martín, Pedro (Advisor, Spain’s Ministry of Economy / Policy Group, EU Blockchain)
Valero, Julián (Murcia University/ Alastria DI Committee working group)

3. SUPERSTRUCTURES

Alarcos, Teresa (W Startup Community –Madrid-/ Alastria Ecosystem)
Aymo, Mahmoud (Comillas Pontifical University -Madrid- FinTech Observatory)
Bernal, Miguel Ángel (DG Contratación, Aragón Government –Spain-)
Bellón, Carlos (Comillas Pontifical University –Madrid-/ FinTech Observatory)
Ibáñez, Eva María (UNED, Madrid)
Moccia, Salvatore (UNIR, La Rioja / Alastria Ecosystem)
Sáenz-Díaz, Rocío (FinTech Observatory, UPC -Madrid-/ FinTech Observatory)

4. NOTARIZATION, CERTIFICATION, PoCs

Campuzano, Jimena (Property Registrar, College of Spain)
Fernández, Cristina (Deusto University, Bilbao / UP Comillas FinTech Observatory)
Galleo, Pablo (CEU University, Madrid)
Menéndez, Moisés (Everis, NTT Data Group / UP Comillas FinTech Observatory)
Rosa Esteva, Josep Lluís de la (U. de Girona)
Sieira, Jesús (Property Registrar, College of Spain)

5. CIVIL LIABILITY

Barrena, Mirari (Deusto Business School –Madrid-)
Castro, José Luis (Autónoma University –Madrid-)
Cores, Carlos de (Montevideo University – Uruguay-)
Corripio, Reyes (Comillas Pontifical University - Madrid-)
Sanz, Pablo (FinTech Observatory, UPC -Madrid-).

By the end of 2019, Prof. Dr. Partal (University of Jaén) was incorporated to the group, and Mr. J. Ruiz changed his position from author to general supervisor of tasks as Alastria Chief Research Officer (CRO).

TASK DISTRIBUTION

Economic
Legal
Technological
Philosophical

Scientific predominant approach of the proposed section /contribution

1. Governance		
Arribas, I.	Alternative dispute resolution mechanisms, off and on-chain	Legal

Ibáñez, E.M.	Accounting and non-financial firm data tokens in Alastria	Philosophical
Partal, A.	Primary and secondary market tokens in Alastria: the case of olive oil tokens	Philosophical

4. Proof of concept

Alarcos, T.	Alastria smart contracts for the Women Startup Community	Economic
Gallego, P.	Security, order and freedom in the Blockchain era: the case of Alastria	Economic
Martínez, R./de la Rosa, J. Ll.	Software basis for the development of a PoC in Alastria	Technological
Milan, J. / Masegosa, A.	Boosting cooperation through Alastria, data sharing and artificial intelligence	Technological

5. Civil liability and related legal issues

Barrena, M.	The principles of Alastria under Spanish civil law	Legal
Campuzano, J. / Sieira, J.	Blockchain, real estate asset tokenization and its protection by the land registry	Legal
Cores, C.	Alastria multilateral contract: a civil law approach	Legal
Corripio, R.	Robots, smart contracts and civil liability in Alastria	Legal

Concerning the contents of the research and the characterization of its multidisciplinary methodology, it is to be noted that:

a) The authors of each piece of research (equivalent to an article of a journal or briefing for a presentation within a symposium or congress dedicated to DLT specialists) have worked independently, limiting research coordination to support and supervise diverse efforts made in the inner domain of different parts of research. This leads to a variety of methods and approaches sustaining the multidisciplinary (technical, legal, economic and philosophical) vision of the complex Alastria reality, where coexist under the same denomination:

- (i) a public-permissioned blockchain community and ecosystem, which is a dynamic force encompassing more than five hundred institutions, both public (including Administrations) and private, profit and non-profit;
 - (ii) a conglomerate of coexisting DLT networks, although most of the papers refer to the only operative existing network in Alastria by 2019, the so called Telsius (since 2020, T) Quorum-Ethereum network.
 - (iii) a private (civil) law association, ruled by Spanish Law of Associations, as the governing entity of the consortium that represents the blockchain ecosystem, submitted to a legal form (the so called *Consortio Red Alastria*).
- b) The selection of contents of the researches and its division (governance, digital identity, infrastructures, proofs of concept and specific legal issues) was made in accordance with the premises and assumptions made by international standardization organisms, mainly the International Standards Organization (ISO) within the context of its Technical Committee 307 (hereinafter ISO / TC 307) and the International Telecommunications Union (hereinafter ITU – T) and its focus group on Distributed Ledger Technology (hereinafter FG DLT). The related working groups of the European Committee for Standardization (CEN), and the European Committee for Electrotechnical Standardization (CENELEC) have also been considered to this respect.
- c) The justification of the selected groups of research matters resides on the grounds of the DLT structure. **Firstly**, governance has been considered as the axis of the organization and structuration of the architectural mechanisms of the blockchain networks, in the double field of inner technical administration (on chain governance, in the jargon), and external or outer organization of the architecture, which is essential in public permissioned DLT networks as Alastria’s, wherein it is crucial to balance public confidence supplied by automated protocols with rules like Istanbul Byzantin Fault Tolerance, with legal security granted by human non automated or manual means, so as to provide additional confidence for legal purposes, though

paradoxally this kind of recentralization led by human intervention is sometimes criticized on the basis that it would betray the automated structure of code execution characterizing the distributed ledger technology. The papers composing this part of the book treat on different ethical, legal, economic and technological aspects of the Alastria governance, from gas incentives to internet-related governance issues, as well as enforcement or litigation relevant aspects.

The second group of papers contain issues on digital identity, in order to debate around this crucial component of data communication in a permissioned blockchain, currently aspiring to empower legal and physical persons with autonomous resources for digital identification when executing transactions. The Alastria networks are about to use a specific self-sovereign identity system, recently proposed to EBSI and ESSIF European partners to be implemented at the EU level, whose characterization and legal structure is detailed in a couple of specific papers. Notwithstanding this, another specific paper shows the potential of the public governmental utilization of the self-sovereign identity model, showing some Spanish public administration experience that took place within the last two years.

Thirdly, superstructures on the Alastria DLT networks have been analyzed under different papers having focused mainly on the smart contract and upper layers of their architectures. Some of the works therein outline the economic advantages that could be obtained by economic actors deploying smart contracts and decentralized applications or DApps. To this respect, several cases of use currently under development are brought to this part of the book in order to show specific utilities of smart contracts in terms of contract execution accuracy and speed, encompassing different sector or industry cases under development. The case of Aragón public-contract utilities on Alastria layers is also examined to compare private with public advantages of these network superstructures.

In a fourth group of works we read those dealing with proofs of concept. The intention of this part is not showing concrete proofs actually running on the T Alastria network or about to

be implemented by associated members of the ecosystem, but reflect on theoretical universal aspects of such proofs from different ecosystemic viewpoints, like those of startup enterprises and communities, citizens requiring financial inclusion, citizenship in general as a political ecosystem, or public registries and other public-law related relevant actors who must supply legal certainty to transactions. Without prejudice to these issues, a technical paper included within this section studies the software bases required to develop a proof of concept in Alastria, completing a wide range of theoretical multidisciplinary approaches to proofs of concept in a public permissioned DLT environment.

Finally, in the fifth part of this conjoint work we read crucial queries and answers on civil liability, statutory provisions and legal principles governing Alastria as a legal private-law moral person, and other related relevant private-law issues like real estate tokens, analysed from the perspective of the civil law or Roman legal code system in force in Spanish jurisdiction.

- d) The multidisciplinary combination of papers facilitates a thoroughly holistic understanding of the national consortium from different academic and scientific approaches. However, basic standards applied to the structure of the research pieces have been respected by all authors irrespective of the peculiarities of their methodology, in order to grant sufficient homogeneity and consistence to the different sections and therefore preserve the essential orientation of the whole work to explain the mission and vision of Alastria as a blockchain consortium, as a community ecosystem and as a coordinated bunch of DLT networks, as explained below.

Governance of permissioned blockchains is a key issue for the short-term success and further development and consolidation of decentralized ledger technology (DLT) general purpose networks. The present book, written by thirty authors and directed by Prof. Ibáñez, one of the Consorcio Red Alastria blockchain community cofounders, shows how this pioneer worldwide public-permissioned national ecosystem, Alastria, is to be governed and organized. The different sections of this collective work analyze the mission and vision of Alastria from a multidisciplinary viewpoint encompassing the technological, economic and legal perspectives of its mission and vision. This collective task also encompasses key issues concerning self-sovereign digital identity, decentralized applications, smart contracts and other legal issues related with the creation, expansion and strategic anchorage of the aforementioned ecosystemic community, unique in Europe and in the world, showing the way for other permissioned consortia to boot in the forecoming years.
