

## GENERAL INFORMATION

Data of the subject	
Subject name	Foundations of Information Systems
Subject code	DTC-IMAT-215
Main program	<a href="#">Grado en Ingeniería Matemática e Inteligencia Artificial</a>
Involved programs	Grado en Ingeniería Matemática e Inteligencia Artificial [Second year]
Credits	6,0 ECTS
Type	Obligatoria (Grado)
Department	Department of Telematics and Computer Sciences
Coordinator	Pablo Sánchez Pérez
Schedule	Morning schedule
Office hours	To be arranged directly with the professor.

Teacher Information	
<b>Teacher</b>	
Name	Antonio García de Burgos Velón
E-Mail	agarciaburgos@icai.comillas.edu
<b>Teacher</b>	
Name	Pablo Sánchez Pérez
Department	Department of Telematics and Computer Sciences
E-Mail	psperez@icai.comillas.edu
<b>Profesores de laboratorio</b>	
<b>Teacher</b>	
Name	Israel Alonso Martínez
Department	Department of Telematics and Computer Sciences
Office	Alberto Aguilera 25
E-Mail	ialonso@icai.comillas.edu
Phone	4267

## DESCRIPTION OF THE SUBJECT

Contextualization of the subject
<b>Prerequisites</b>
Python programming.
Basic computer skills.

## Course contents

Contents
<b>Block 1. General introduction</b>
General Introduction
Basic elements of a computer.
Functions and general structure of an operating system.
<b>Block 2. Introduction to the Linux operating system, Network, and environments.</b>
Introduction to the Linux operating system, Network, and environments.
GNU/Linux Operating System.
Network protocols.
Python dependencies.
<b>Block 3: Process management</b>
Process management
Processes and threads. Characteristics and implementation in Python.
Process scheduling.
Concurrency, mutual exclusion, semaphores.
<b>Block 4. Virtual machines</b>
Virtual machines
Virtual machines deployment.
Distributed programming with Virtual Machines.
Comparison of virtualisation using containers and virtual machines.
<b>Block 5. Memory management</b>
Memory management
Memory requirements and partitioning.
Memory allocation schemes.
Virtual memory.
<b>Block 6. Input/output management and file systems</b>
Input/output management and file systems

Principles, input/output techniques.

File systems: files and directories

File system implementation.

## EVALUATION AND CRITERIA

Evaluation activities	Evaluation criteria	Weight
Intersemester exam: 20% Final exam: 50%	<b>Intersemester exam (20%):</b> exam oriented to understand the theoretical concepts of the fundamentals of operating systems (including the basic architecture of a computer), Linux commands, process management and process planning (if possible). <b>Final exam (50%):</b> exam containing the topics of the intersemester exam and extending it with additional concepts related to process management, virtualisation, memory and file management.	70 %
Final project: 15%	<b>Final project (15%):</b> In addition to functionality, the design used in the project, the cleanliness and style of the code, and the application of the course syllabus will be evaluated.	15 %
Weekly assignments (15%):	<b>Weekly assignments (15%):</b> In addition to functionality, the code style used in the assignments and the quality of the reports requested will be assessed.	15 %

## Grading

There are two calls. Ordinary call in December/January and Extraordinary call in June.

## Ordinary call

The grade for the Ordinary call (CO) will be as follows:

- 50% for the final exam (EX\_F).
- 20% the inter-semester exam (EX\_I)
- 15% for the project (PROY)
- 15% the weekly assignments (PRACT).

In other words:

$$CO = 0.5 * EX\_F + 0.2 EX\_I + 0.15 * PROY + 0.15 * PRACT$$

CO ≥ 5 will be necessary to pass the course and the following conditions must be fulfilled:

- It will be mandatory that EX\_F ≥ 5. That is, the grade of the final exam of the subject must be equal to or higher than 5.
- It will be mandatory that (PROY + PRACT)/ 2 ≥ 5. That is, a grade greater than or equal to 5 must be obtained in the average obtained between the project and the weekly assignments in both extraordinary and ordinary calls in order to pass the course. If this minimum grade is not reached in the ordinary call, both the project and the assignments can be handed in again in the extraordinary call. If this condition is not met, CO = (PROY + PRACT)/ 2. The grade of the exam in the ordinary call will be kept for the extraordinary call if it is passed.
- It will be necessary to obtain a grade of at least 4 in both the project and the average of the assignments in order to pass the course. In other words, PROY ≥ 4 and PRACT ≥ 4. If this restriction is not met, CO = MIN(PRACT, PROY). The grade for the exam in the ordinary call is saved for the extraordinary call if the student passes.

If the student fails to attend 15% or more of the classroom hours of this subject, the student will not be allowed to take the final exam in both the ordinary and extraordinary calls.

## Extraordinary call

The grade for the Extraordinary call (EC) will be as follows:

- 70% for the final exam of the course (EX\_F, the inter-semester exam is not taken into account).
- 15% for the project (PROY)
- 15% for the weekly assignments (PRACT).

In other words:

$$CE = 0.7 * EX\_F + 0.15 * PROJ + 0.15 * PRACT$$

CE ≥ 5 will be necessary to pass the course and the following restrictions must be met:

- It will be mandatory that EX\_F ≥ 5. That is to say, the mark of the final exam of the subject must be equal to or higher than 5.
- It is compulsory that (PROY + PRACT)/ 2 ≥ 5. That is, a grade greater than or equal to 5 must be obtained in the average obtained between the project and the weekly assignments. If this minimum grade is not reached, then CE = (PROY + PRACT)/ 2.
- It will be necessary to obtain a grade of at least 4 in both the project and the average of the assignments in order to pass the course. In other words, PROY ≥ 4 and PRACT ≥ 4. If this condition is not met, CE = MIN(PRACT, PROY).

If the student fails to attend 15% or more of the classroom hours of this subject, the student will not be allowed to take the final exam in both the ordinary and extraordinary calls.

## WORK PLAN AND SCHEDULE

Activities	Date of realization	Delivery date
Reading and study of the theoretical contents, notes and code provided by the teacher.	After and before each class	

Final Project	When we start the block about virtualisation	Last week of classes
Exams realisation	October, December/January, and June	
Weekly assignments realisation	Before, during and after the lab class	1 week after publication in moodle
Block 1. General introduction	At the beginning of the course	About a week and a half
Block 2. Introduction to the Linux operating system, Network, and environments.	After Block 1. During the month of September	Approximately 2.5 weeks
Block 3. Process management	After Block 2. End of September. October	Approximately 4 weeks
Block 4. Virtual machines	After Block 3. November	Approximately 2 weeks
Block 5. Memory management.	After Block 4. Second half of November	Approximately 1.5 weeks
Block 6. Input/output management and file systems.	After finishing Block 5. December.	Approximately 1 week

## BIBLIOGRAPHY AND RESOURCES

### Basic References

Moodle (teacher's manuals and slides).
