List of Figures and Tables	<i>xi</i>
About the Editors	<i>xiii</i>
About the Contributors	<i>xv</i>
Acknowledgments	<i>xxiii</i>

## Part I The Cryptoasset Landscape

<b>Chapter 1 Cryptoassets: An Overview</b> <i>H. Kent Baker, Hugo Benedetti, Ehsan Nikbakht and Sean Stein Smith</i>	<i>3</i>
<b>Chapter 2 The Cryptoasset Auditing and Accounting Landscape</b> <i>Sean Stein Smith</i>	<i>13</i>
<b>Chapter 3 The Crypto Investing Landscape</b> <i>John Ward</i>	<i>25</i>

## Part II Types of Cryptoassets

<b>Chapter 4 Cryptocurrencies</b> <i>Lennart Ante</i>	<i>45</i>
<b>Chapter 5 Security Tokens</b> <i>Paul P. Momtaz</i>	<i>61</i>
<b>Chapter 6 Utility Tokens</b> <i>Hugo Benedetti, Christian Caceres and Luis Álvaro Abarzúa</i>	<i>79</i>

<b>Chapter 7 Stablecoins</b> <i>Ingo Fiedler and Lennart Ante</i>	93
--	----

<b>Chapter 8 Tokenized Assets and Securities</b> <i>Hugo Benedetti and Gabriel Rodriguez-Garnica</i>	107
---	-----

### Part III Cryptoassets as Investment Opportunities

<b>Chapter 9 A Comparative Review of Cryptoasset Products</b> <i>Kristin M. Kalish, Kerem Proulx and Andrew C. Spieler</i>	125
---	-----

<b>Chapter 10 Decentralized Finance</b> <i>Kiran Pandian, Daniel Pfeiffer and Samson Qian</i>	141
--	-----

<b>Chapter 11 Blockchain and Crypto Exchange-traded Funds</b> <i>Philip C. Sookram</i>	157
---	-----

<b>Chapter 12 Approaches to Cryptocurrency Valuation</b> <i>Arman Eshraghi</i>	171
---	-----

<b>Chapter 13 Cryptoassets in a Portfolio Context</b> <i>Robinpreet Dhillon and Ehsan Nikbakht</i>	185
---	-----

<b>Chapter 14 Protection of Portfolios and Financial Consumers from Cryptoasset Frauds</b> <i>Ibrahim E. Sancak</i>	199
--	-----

### Part IV Trading, Reporting, and Technical Aspects

<b>Chapter 15 General Institutional Considerations of Blockchain and Emerging Applications</b> <i>Peter C. Earle and David M. Waugh</i>	219
--	-----

<b>Chapter 16 Custody, Provenance, and Reporting of Blockchain and Cryptoassets</b> <i>Rocher Cyrus</i>	233
--	-----

<b>Chapter 17 Tokenized and Non-tokenized Assets: Legal Considerations</b> <i>Brett Cotler</i>	249
---	-----

<b>Chapter 18 The Underlying Technology for Cryptoassets</b>	
<i>Alevtina Dubovitskaya Ackerer and Damien Ackerer</i>	265
<b>Chapter 19 Central Bank Digital Currencies: Opening Pandora’s Box or Paving the Future of Money?</b>	
<i>Dimitrios Salampasis, Patrick Schueffel, Russell Dominic and Duncan Cameron</i>	283
<b>Part V Other Cryptoasset Issues</b>	
<b>Chapter 20 Trade Settlements</b>	
<i>Hugo Benedetti, Ehsan Nikbakht and Giga Zukhubaia</i>	309
<b>Chapter 21 A Closer Look into Decentralized Finance</b>	
<i>Hugo Benedetti and Sebastián Labbé</i>	327
<b>Chapter 22 Cryptocurrency Exchanges and the Future of Cryptoassets</b>	
<i>Antonio Brasse and Samuel Hyun</i>	341
<b>Discussion Questions and Answers: Chapters 2–22</b>	355

## About the Editors

**H. Kent Baker**, CFA, CMA, is a University Professor of Finance at the Kogod School of Business, American University. He is an award-winning author who has published 41 books and more than 200 academic articles in such journals as the *Journal of Finance* and *Journal of Financial and Quantitative Analysis*. Professor Baker has been a consultant or trainer for more than 100 organizations. He has received numerous awards for research, teaching, and service, including University Scholar/Teacher of the Year at American University and the 2019 Distinguished Scholar from the Southern Finance Association (SFA). He was also the SFA's past President. Professor Baker received a BSBA in Management from Georgetown University and an MBA, MEd, and DBA from the University of Maryland. He also has an MS in Quantitative Methods, an MA in Training and Career Development, a PhD in Educational Administration and Organizational Development, and a PhD in Counseling and Student Development from American University.

**Hugo Benedetti** is an Assistant Professor at ESE Business School, Universidad de Los Andes, Chile. His research focuses on entrepreneurial finance, venture capital, and FinTech, particularly blockchain technology and blockchain-enabled assets. The *Economist*, *Bloomberg*, *The Wall Street Journal*, *Nasdaq*, and several crypto-industry publications have featured his research. Professor Benedetti frequently delivers workshops on entrepreneurial finance, venture capital, and FinTech to incubators, angel investor networks, and venture capital funds. He has advised and mentored several FinTech and blockchain projects. Before joining academia, he co-founded a financial advisory boutique and held leadership roles in corporate finance, financial advisory, and venture capital at world-class firms. Professor Benedetti is a Fulbright scholar and received a PhD in Finance from Boston College.

**Ehsan Nikbakht**, CFA, FRM, is a Professor of Finance at Frank G. Zarb School of Business, Hofstra University. His research focuses on international finance, hedge funds, real estate, and financial blockchain. Professor Nikbakht has published in the *Journal of Corporate Finance*, *Journal of International Accounting, Auditing and Taxation*, *Journal of Financial Crime*, *Managerial Finance*, *Global Finance Journal*, and *International Journal of Business*. He is a Co-editor of *The*

*Emerald Handbook of Blockchain for Business*. In recognition of his research monograph, *Foreign Loans and Economic Performance*, Professor Nikbakht received a Stessin Prize for “Outstanding Scholarly Publication.” He received a DBA in Finance from George Washington University.

**Sean Stein Smith** is Assistant Professor of Business and Economics at Lehman College, City University of New York. He serves on the Advisory Board of the Wall Street Blockchain Alliance, where he chairs the Accounting Work Group. Professor Smith has published numerous articles and several books focusing on the intersection of accounting and emerging technologies, including the *Forbes* Crypto & Blockchain vertical. He is a member of the NJCPA Board of Trustees and president of the NYSSCPA Manhattan-Bronx chapter. Professor Smith was an AICPA Outstanding CPA of Year (2022). He is on the Advisory Board of Gilded and is a Strategic Advisor to the Central Bank Digital Currency Think Tank. He served as a Visiting Research Fellow at the American Institute of Economic Research with a book due for publication in late 2022. He received a BS, MS, and MBA from Fairleigh Dickinson and a DBA from Capella University.

## About the Contributors

**Luis Álvaro Abarzúa** is a specialist in educational policies for improving learning at the school and professional levels. He currently advises several scientific and technological-based startups. He worked at the Ministry of Education of the Government of Chile, where he supported the implementation of national educational policies. He is the Co-founder of an Ed-tech company present in six countries in the Americas. He is an enthusiastic researcher in blockchain and cryptocurrencies, delivering courses on decentralized finance and raising business ideas oriented to public education. Trained as a sociologist, he has completed postgraduate studies in Multivariate Statistical Analysis and has a Diploma in Applied Studies in Entrepreneurship and Innovation from Stanford University. He is pursuing a postgraduate degree in Innovation from Pontificia Universidad Católica de Chile.

**Alevtina Dubovitskaya Ackerer** is a Docent at Lucerne University of Applied Science and Arts, Switzerland. Her work as a Consultant at Swisscom and Gilded ranges from client advisory to designing and implementing blockchain-based solutions compliant with the laws and regulations. She has experience in designing protocols for privacy-preserving data aggregation and sharing. She also develops the systems using blockchain technologies, focusing on accountable and trusted interactions and reputation management in dynamic distributed systems. Her research interests are distributed data management for blockchain and cryptographic solutions for providing security and privacy. She has a PhD from the Swiss Federal Institute of Technology in Lausanne.

**Damien Ackerer** is a Senior Quantitative Researcher at Covario, where he works on data-driven solutions for digital asset management, such as optimal execution algorithms for cryptoassets. He is also an External Lecturer at the Swiss Federal Institute of Technology in Lausanne (EPFL), where he created a course on Machine Learning for Finance. He worked in applied research at major banks in Switzerland, UBS, and Swissquote Bank. In these institutions, he developed methodologies for risk calculation, derivatives margining, portfolio allocation, and systematic trading strategies. He has a PhD in Finance from EPFL. He focused on the pricing of financial derivatives contracts using quantitative models.

**Lennart Ante** co-founded the Blockchain Research Lab. As a researcher, he evaluates the use of blockchain technology across various sectors and studies the

implications and characteristics of cryptocurrencies and their respective markets. He believes that blockchain technology will positively influence business models and society. Thus, he studies the technology's positive potential and assesses its barriers and risks. Besides his research activities, he is a co-founder of STOKR, which provides asset tokenization and corporate financing via blockchain technology. He studied business administration at the University of Cologne, TU Clausthal, and Universität Hamburg. He obtained a PhD in Finance at the University of Hamburg.

**Antonio Brasse** is the CEO of BlockQuake, a regulatory-driven digital asset and cryptocurrency trading platform. He has nearly two decades of regulatory, financial, operational, and technology audit experience within the financial services industry. He spent much of his career at AIG, Citi, and New York Life before co-founding BlockQuake. Before delving into cryptocurrency trading, his personal trading experience included stocks, options, and forex. He holds a BS in Accounting and Computer Science from the City University of New York – Brooklyn College. He also has the following certifications: Certified Information Systems Auditor, Certified Internal Auditor, Certified Financial Services Auditor, Certified Anti-Money Laundering Specialist, and Certified Public Accountant.

**Christian Caceres** is an Adjunct Professor of Corporate Finance and Entrepreneurship Management at Universidad Central and Universidad de las Americas. He has experience in designing, developing, and implementing business models in commercial strategies focused on innovation processes and customer experience. His research concerns the entrepreneurial ecosystem and how to build collaboration and complementation between different stakeholders. He coaches students and companies in several graduate programs at Pontificia Universidad Católica de Chile, and Impulso Chileno, a program supporting small and medium enterprises. He has also developed several ventures, including Kolife SpA and Fintelligence. He has more than 20 years of experience in the financial sector. He is a Civil Industrial Engineer with a Diploma in Computer Science. He has an MBA from Pontificia Universidad Católica de Chile and a Master's in Finance and Investments from ESE Business School, Universidad de los Andes, Chile.

**Duncan Cameron** is a management consultant specializing in blockchain technologies, cryptocurrencies, and tokenomics. He is currently a Manager at Capgemini Invent, the innovation, design, and transformation arm of Capgemini. His career spans a range of business and technical innovation work across digital IT strategy, IT operating model design, technical architecture, and project management. He is a former Australian Lawyer and holds an LLB with honors and a BA from Monash University.

**Brett Cotler** is a tax and cryptocurrency attorney at Seward & Kissel LLP. He advises investment funds, FinTech startups, and public and private companies on US federal income tax and business law matters. He also advises on business transactions, securities offerings, structured finance and securitization vehicles,

and joint ventures. He received a BA and JD from Rutgers University and an LLM in Taxation from New York University.

**Rocher Cyrus, CPA, CGMA**, is the Managing Partner of Global International Management (GIM.cpa) and a Partner of Confirmation (part of Thomson Reuters) and Becker Professional Education. He is also a channel learning partner for the Association of International Certified Professional Accountants (AICPA). Mr. Cyrus was an early adopter of Gilded.finance, a platform unifying fiat and crypto back-office operations. He is also the Owner and Director of *Curacao Business Magazine*, which has published blockchain and technology-related articles. He has been driving innovation through technology, education, and connectivity with more than 10 years audit experience at PwC and KPMG. He holds a BS in accounting from the University of Curacao. Mr. Cyrus is enrolled in the double degree Global Masters in Blockchain Technologies program from Zigurat Innovation and Technology Business School and the University of Barcelona.

**Robinpreet Dhillon** is a Research Associate at Third Bridge LLC, New York. Formerly, he was an Equity Analyst at the Student Management Investment Fund, sponsored by Hofstra University. He has been on the executive board member of the Association of Latino Professionals for America chapter. He assisted organization members with professional development by leading weekly interactive meetings and giving presentations. He participated in competitive Olympic Weightlifting events. He received a BBA degree in Finance with honors from Zarb School of Business, Hofstra University.

**Russell Dominic** is an Australian Lawyer currently undertaking a Master of Financial Technologies at the Swinburne University of Technology. He is also a member of the Digital Law Association of Australia. Previously, he worked with an Australian FinTech company that pioneered using a capital-raising platform to accept fiat and cryptocurrency in Australia. He is now working in a PropTech company. He has first-hand knowledge of legal tech and is enthusiastic about regulation and the impact of emerging technology that could affect organizations and society. He has a Legum Baccalaureus (LLB) at the University of Tasmania. He also holds a Graduate Diploma in Legal Practice from the Leo Cussen Centre for Law.

**Peter C. Earle** is an Economist in the Research Faculty of the American Institute for Economic Research (AIER). Before joining AIER in 2018, he founded Intangible Economics, LLC, a cryptocurrency and gaming consultancy. He was a trader and analyst at different securities firms and hedge funds in the New York metropolitan area. His research and writing focus on financial markets, monetary policy, cryptocurrencies, and problems in economic measurement. He has written for and been cited in the *Wall Street Journal*, *Bloomberg*, *Barron's*, *Fortune*, *Forbes*, *Grant's Interest Rate Observer*, and other media venues. He has written and edited seven books and written hundreds of articles for various research institutes. He has a BS in Engineering from the United States Military Academy at West Point, an MBA in Finance, and an MA in Applied Economics.

**Arman Eshraghi** holds the Chair of Finance and Investment at Cardiff Business School, Cardiff University, United Kingdom. He is an Editor of the *International Review of Economics and Finance*, Senior Editor of *Finance Research Letters*, Director of the Cardiff Fintech Research Group, and an Advisory Board Member of Fintech Wales. His academic research spans finance, accounting, and psychology, including behavioral finance, financial technology, and corporate governance. His work appears in some leading journals in the field. Various media cite his research, including the *Financial Times*, *Washington Post*, *Harvard Business Review*, *Forbes*, and *Bloomberg*. He has also contributed to handbooks published by Cambridge University, John Wiley & Sons, Springer, and Routledge. He holds a BEng and MBA from Sharif University and a PhD in Finance from the University of Edinburgh.

**Ingo Fiedler** is Co-founder of the non-profit Blockchain Research Lab in Hamburg, and an Affiliate Assistant Professor at Concordia University, Montreal. He has authored nine books and over fifty articles in academic journals. He adds to the public knowledge on his main research topics – gambling and blockchain – by commenting in various media outlets and consulting with key policy stakeholders. He holds diplomas in business administration and economics and obtained his award-winning PhD from the University of Hamburg.

**Samuel Hyun** is the Chief Strategist of Cryptocurrency Markets at BlockQuake, with over seven years of experience trading cryptocurrencies. He has a deep understanding of CEX and DEX trading platforms and cryptocurrency markets. Before joining BlockQuake, he was an Associate in Barclay's Treasury Liquidity Risk Department and a Senior Analyst in the Internal Audit Group at AIG. He holds a BS in Mathematics and Economics from New York University.

**Kristin M. Kalish** is an Independent Financial Consultant. She directs an incubator program at Yale University and Georgetown University for young entrepreneurs globally. She is currently a Graduate Research Fellow at Villanova University, pursuing a Master of Science in Finance. Her prior work experience includes internships in private investment management and commodity analysis at a Chinese investment firm. She graduated summa cum laude from Hofstra University, earning a BBA with double majors in Finance and Management. She also holds a BS in Economics from Dongbei University of Finance and Economics.

**Sebastián Labbé** is a Research Assistant at the Institute of Concrete Structures and Building Materials at Karlsruhe Institute of Technology. His research focuses on structural dynamics, concrete technologies, and modeling impact loads due to railway traffic. *Building and Construction Materials* and *The German Federal Railway Authority* have featured his research. He is a blockchain enthusiast due to his experience with personal finance while living abroad, focusing on the technology, applications, and teaching of DeFi. He is a CHILFITEC and DAAD Alumni and received a Civil Engineering and Master of Engineering degree from Pontificia Universidad Católica de Chile and an MS at École Centrale Paris.

**Paul P. Momtaz** is a Professor of Financial Economics at the House of Finance at Goethe University Frankfurt. He holds a Chair of Private Equity and the Metzler Professor of International Finance at the Wharton School at the University of Pennsylvania. His research focuses on decentralized and private markets, particularly FinTech, entrepreneurship, and innovation economics. He has published in journals such as the *Journal of Corporate Finance*, *Strategic Management Journal*, *Strategic Entrepreneurship Journal*, and *Journal of Business Venturing*. He received a PhD in Economics and a *Habilitation* from the University of Hamburg, a Diploma in Applied Mathematics from the University of Paris, and an MPhil in Innovation, Strategy, and Organization from the Judge Business School at the University of Cambridge. He is also a PhD candidate in Finance at the University of California Los Angeles.

**Kiran Pandian** is a Graduate Student in Finance at the Frank G. Zarb School of Business at Hofstra University. He is a recipient of Dean's Scholarship and conducts blockchain research. He also mentors students in Blockchain Technology. He also holds an MS in Industrial Engineering from the University of Wisconsin, Madison.

**Daniel Pfeiffer** is an Equity Research Analyst at J.P. Morgan, in New York, where he covers Internet stocks. He was also an Equity Research Intern at Oppenheimer & Co. Inc. where he researched digital asset companies. He was a Team Leader for Adirondack Cup Competition and the CFA Institute Investment Research Challenge. He was the Coordinator of the Bloomberg Trading Room at the Frank G. Zarb School of Business, Hofstra University, where he received a BBA degree with a major in Finance and a minor in Accounting.

**Kerem Proulx** is an Independent Financial Consultant with experience working in roles involving operational risk, leveraged finance, and credit risk. He focuses on modeling tail risk using computational methods. He has a BBA in Finance from the Frank G. Zarb School of Business at Hofstra University. He received high honors for his research in applying machine learning methods to forecasting equity volatility.

**Samson Qian** is a Master of Finance candidate at the MIT Sloan School of Management. He was a researcher in the blockchain group at the San Diego Supercomputer Center. He engaged in data science and machine learning at the Halicioglu Data Science Institute at University of California, San Diego. As a quantitative research intern at Rebellion Research, he researched intraday patterns and assessed crypto trading strategies. He holds a BS in Data Science from the University of California, San Diego.

**Gabriel Rodríguez-Garnica** is an Assistant Professor of Financial Economics, Accounting, and Digital Finance at the Business Department, University Carlos III Madrid, Spain. His research focuses on entrepreneurial finance, behavioral finance, and FinTech, particularly crowdfunding and cryptoassets or

blockchain-enabled assets. He was a Visiting Research Fellow at the Questrom School of Business, Boston University, where he continued his research on FinTech. He previously studied at the University of Technology Sydney, Centennial College Toronto, Middlebury Institute of International Studies at Monterey, and the University of La Rioja. He is a PhD candidate in Finance at University Carlos III Madrid, Spain.

**Dimitrios Salampasis** is the Director, Master of FinTech, and Lecturer, FinTech Innovation and Entrepreneurship, the Swinburne University of Technology in Melbourne, Australia. He is a Visiting Professor of FinTech at the University of Québec at Rimouski, Canada, and a Blockchain and FinTech Fellow at the Singapore University of Social Sciences. He is also a Visiting Faculty at the School of Management in Fribourg, Switzerland. His research interests concern the organizational, human, technological, and societal sides of FinTech innovation. He is a mentor and advisor for start-ups and scale-ups in Australia and abroad. He is regularly involved in speaking engagements and advisory work with international stakeholders. He has a PhD in Industrial Engineering Business and Management from the Lappeenranta University of Technology in Finland and two Executive Program Certificates from Harvard Business School Online and Columbia Business School.

**Ibrahim E. Sancak** is a Professor of Finance at the ZWIRN-Research Center of the Ostfalia University of Applied Sciences (Germany) with more than twenty years of hands-on experience in finance. He served as the founding director of the Market Oversight and Enforcement Division at the Capital Markets Board of Turkey. Since joining Ostfalia in February 2019, he has been actively conducting scientific research in sustainable finance and digital finance and teaching sustainable finance courses. In 2020, he took part in delivering a sustainability management guide for the “Bankenfachverband,” a key financial industry association in Germany. Dr. Sancak is the lead editor of “Essential Concepts of Sustainable Finance: An A-Z Guide,” a book project approved by the Routledge Editorial Board in February 2022. He holds a BSBA and MBA from Ankara University (Turkey), an MSF from the George Washington University (the U.S.), and PhD in banking from Marmara University (Turkey). Dr. Sancak also holds three certificates from the U.S. Securities and Exchange Commission (SEC) on market regulation and supervision. He is an academic member of the European Corporate Governance Institute (ECGI).

**Patrick Schueffel** is an Adjunct Professor at Fribourg’s School of Management in Switzerland. His research focus is on banking, finance, and entrepreneurship. He also works as an advisor and founder on crypto projects spanning Europe to Asia. Before a recent three-year stint in Singapore, he worked in banking in Zurich, Switzerland, as the Chief Operating Officer of Saxo Bank. He was a member of the Senior Management at Credit Suisse’s headquarters in Zurich, where he headed a global innovation team. He has published in scientific journals and practitioner outlets. He holds a PhD from the University of Reading and

postgraduate degrees from Henley Business School, the Norwegian School of Economics, and the University of Mannheim.

**Philip C. Sookram, CPA**, is an Assistant Professor of Accounting at the Frank J. Guarini School of Business, Saint Peter's University, and Director of the Master of Science in Accountancy Graduate Program. He is an active member of the New York State Society of CPAs (NYSSCPA), serving as a Manhattan/Bronx Chapter Board Member and Chairman of the Manhattan/Bronx Chapter Next-Gen Committee. He is also involved in the New Jersey Society of CPAs (NJCPA), serving as a member of the Emerging Leaders Council. In recognition of his service, he received the Under 40 Award at the NYSSCPA in 2020. He is a recipient of the NJCPA Ovation Award in the Emerging Leader category in 2020. He has an undergraduate degree in Accounting from the University of Miami and a MAcc from Rutgers Business School — Newark and New Brunswick.

**Andrew C. Spieler, CFA, CAIA, FRM**, is the Robert F. Dall Distinguished Professor of Finance in the Frank G. Zarb School of Business at Hofstra University. He has published in *Real Estate Economics*, *Journal of Real Estate Finance and Economics*, *Journal of Real Estate Portfolio Management*, *Global Finance Journal*, *Journal of Applied Finance*, and other journals. He served as Chair of the Derivatives Committee at the New York Society of Securities Analysts. He also serves as Co-Director of the annual real estate conference sponsored by the Wilbur F. Breslin Center for Real Estate Studies. He received a BA in Mathematics and a BS in Economics from Binghamton University (SUNY), an MS in Finance from Indiana University, and an MBA and PhD in Finance from Binghamton University (SUNY).

**John Ward** is a Managing Director in Kroll's New York office and is a member of the Alternative Asset Advisory Group and the Portfolio Valuation practice. He has more than 30 years of financial and investment management experience. He evaluates operational risks for hedge funds, private equity and private credit funds, cryptocurrency funds, real estate funds, and venture capital funds. He has experience in various investment strategies and large institutional investment advisors and emerging managers. He works with endowments, foundations, public and private pensions, sovereign wealth funds, and family offices to undertake due diligence projects supporting their investment mandates. He develops best practices in investment due diligence and supports their efforts to implement institutional best practices throughout their organizations. He has a BSBA in finance and marketing from the University of Florida. He is also a Certified Due Diligence Analyst and a Board Member of the Investment Management Due Diligence Association.

**David M. Waugh** is the Managing Editor at the American Institute for Economic Research (AIER). He is also a Don Lavoie Fellow with the Mercatus Center at George Mason University. Before joining AIER in 2020, he worked as an Associate at S&P Global Market Intelligence. His work focuses on cryptocurrencies,

financial markets, political economy, and higher education. RealClearMarkets, the Future of Freedom Foundation, the James G. Martin Center for Academic Renewal, ZeroHedge, and other outlets have featured his work. He received a BA in Economics from Hampden-Sydney College. While at Hampden-Sydney, he was a Senior Fellow with the Center for the Study of Political Economy and worked in the Economics Department as a Teaching Assistant.

**Giga Zukhubaia** is a graduate student in Operations Research at Fun Foundation School of Engineering and Applied Science, Columbia University. He worked as a Trading Research Analyst for the GreenEco Interments in Moscow, Russia. He also served as an Acting Chief Operating Officer for Country Cleaners Corporations through the Hofstra IdeaHub Startup Incubator, Center for Entrepreneurship. He received a BBA in Finance from Hofstra University and the Dongbei University of Finance and Economics in China.

# Acknowledgments

“To write is human, to edit is divine.”

Stephen King

Publishing a book is a team effort. Therefore, we have several major players to thank for their roles in this book project. For this edited book, the chapter authors created the content. We are grateful to them for devoting countless hours to writing and revising their chapters. Our role as editors was to honor their intention while helping to enhance each chapter’s clarity. We wanted the book’s format and style to be internally consistent so that it is more than just a collection of chapters from different authors. Michael Lee notes, “The first draft reveals the art; revision reveals the artist.” We also appreciate the high degree of professionalism exhibited by Emerald Publishing’s staff, especially Charlotte C. Maiorana (Vice President, Emerald Books), Kirsty Woods (Contact Development Editor), and Pavithra Mutha (Production Manager). We also thank S. Rajachitra, Lead Project Manager, KnowledgeWorks Global Ltd. We appreciate the support provided by our respective institutions: Kogod School of Business at American University; ESE Business School at Universidad de Los Andes, Chile; Frank G. Zarb School of Business at Hofstra University; and Lehman College at the City University of New York. We thank our families for their support. Finally, we dedicate this book to Linda and Rory Baker; Pascale and Luciano Benedetti; Parvin, Auzin, and Daniel Nikbakht; Ximena Romero; and Frederick Smith, Kathleen Stein Smith, Patrick Stein Smith, and Frederick Stein Smith.

## **The Cryptoasset Landscape**

*This page intentionally left blank*

## Chapter 1

# Cryptoassets: An Overview

*H. Kent Baker, Hugo Benedetti, Ehsan Nikbakht and Sean Stein Smith*

### Abstract

Bitcoin's introduction as the first cryptoasset in 2009 ushered in a new era, representing a seismic shift in the financial markets. Since then, this evolving asset class has generated much interest, excitement, and growth. This chapter begins by providing a brief background of cryptoassets. It then discusses their main types (cryptocurrencies, security tokens, and utility tokens), users (individual investors, major financial institutions, endowments, and hedge funds), and benefits and drawbacks. Next, it sets forth the book's purpose, distinguishing features, intended audience, and structure. The chapter provides a synopsis of each of the remaining 21 chapters. Although no single book can encompass all changes and iterations of these technologies as they emerge in the marketplace, this book brings together a broad collection of industry expertise and academic analysis to create a book helpful to researchers, academics, and practitioners.

*Keywords:* Cryptoassets; bitcoin; security tokens; utility tokens; individual investors; financial institutions

### Introduction

Since bitcoin's introduction as the first cryptoasset in 2009, this evolving asset class has generated considerable interest and excitement among both academics and practitioners. A *cryptoasset* is a private digital asset that uses cryptography and serves as a medium of exchange. The most well-known cryptoassets are cryptocurrencies, such as bitcoin, that permit buying goods and services or trading them for a potential profit. However, cryptocurrencies are not like using cash and are not very "money-like." Thus, cryptoasset owners view them as investments and expect their value to rise.

Besides cryptocurrencies, other types of cryptoassets include security tokens, utility tokens, stablecoins, and tokenized securities. The price of cryptoassets can be unpredictable and highly volatile, making them risky investments. Some, like bitcoin, are well-known global brands trading on exchanges worldwide. Others have a much smaller market presence.

What is sure about cryptoassets is that they are here to stay. CoinMarketCap, a popular data aggregator, reports thousands of different cryptoassets, with new ones created frequently. Multiple cryptoassets exist because their creators optimize the underlying blockchains for various uses. The market capitalization of some cryptoassets exceeds \$1 trillion. Those involved in cryptoassets include individual investors, major financial institutions, endowments, and hedge funds.

Cryptoassets, especially more prominent cryptocurrencies such as bitcoin, are attractive to investors because of potentially high returns. However, increased volatility accompanies high returns. Another potential benefit of including bitcoin in an investment portfolio is its low correlations with traditional assets such as stocks and bonds. Thus, including bitcoin in a portfolio offers diversification benefits. Over time, however, bitcoin's low correlations with other asset classes are likely to rise. Bitcoin is currently an early-stage investment opportunity, and its core drivers differ from those of other assets. Despite the investment opportunities offered by bitcoin and other cryptoassets, investors entering this market face substantial challenges, including low quality of information, a lack of sound or academically defensible valuation models, regulatory uncertainty, and inadequate due diligence.

## **About this Book**

This section discusses the book's purpose, distinguishing features, and intended audience.

### ***Purpose***

This book offers curious investors and others, such as investment practitioners, academics, and students, a helpful guide to understanding cryptoassets and their role in investment portfolios.

### ***Distinguishing Features***

The following features distinguish *The Emerald Handbook on Cryptoassets: Investment Opportunities and Challenges* from others.

- This book provides a detailed examination of cryptoassets from an investment perspective. It focuses on investment opportunities and real-world challenges rather than technical or theoretical topics.
- It skillfully blends scholars' and practitioners' contributions into a single review of critical topics and issues about cryptoassets. The contributors' varied

backgrounds ensure different perspectives and a rich interplay of ideas. The book also reflects the latest trends and research.

- The book follows an internally consistent format and style while retaining the contributors' content and perspectives. Like a choir, the book's authors have separate voices. A goal of a choir and this book is to have the voices act harmoniously. This task requires skilled editing to create a smooth flow between chapters. Hence, the book is an orderly presentation of various topics organized into separate sections from different authors.
- When discussing the results of empirical studies that connect theory and practice, our objective is to make them understandable to a wide array of readers with different backgrounds.
- The end of each chapter contains four to six questions reinforcing key concepts. The end of the book includes guideline answers for each question. This feature should help faculty and students use the book in courses.

### ***Intended Audience***

*The Emerald Handbook on Cryptoassets: Investment Opportunities and Challenges* should appeal to its target audience of academics and practitioners because of its investor perspective. Because it covers a broad range of topics related to cryptoassets, it can serve as a guide for investors, financial practitioners, and students. The book should interest anyone seeking to become more knowledgeable about this fast-moving subject area.

This volume spans the gamut from theoretical to practical while offering the right balance of detailed and user-friendly coverage. Discussion of relevant research permeates the book. Although other books are available on cryptoassets, especially cryptocurrencies, few examine this topic from an investor's perspective. Scholarly, edited books, including academics and practitioners' contributions on the investment opportunities and challenges facing cryptoassets, are largely absent in the marketplace. This book helps to fill this gap and contributes to the growing field of cryptoassets.

### ***Book's Structure***

The remainder of this book consists of 21 chapters divided into five parts. Below is a brief synopsis of each section and chapter.

**Part I. The Cryptoasset Landscape.** Besides the current chapter, this part includes Chapters 2 and 3, examining the cryptoasset auditing, accounting, and investing landscapes.

**Chapter 2 – The Cryptoasset Auditing and Accounting Landscape (Sean Stein Smith).** This chapter examines emerging topics and trends as it connects cryptoassets to accounting, auditing, and financial reporting. It discusses the treatment of cryptoassets from a financial reporting perspective under United States and international accounting standards, frequently asked questions about auditing, attestation, and potential best practices for auditing various cryptoassets. It also discusses accounting for now and potential in the future. The chapter

outlines how the rapidly changing cryptoasset landscape could lead to differentiated accounting treatment and audit best practices for practitioners seeking to attest to certain aspects of cryptoassets.

**Chapter 3 – *The Crypto Investing Landscape (John Ward)*.** This chapter discusses the current landscape for digital asset investing and the operational risks facing cryptocurrency investors. It also examines the ongoing progress in the institutionalization of digital asset investment and the risks inherent when investing in cryptocurrencies and blockchain opportunities. Investors considering investing in a public or private fund that invests in digital assets must be aware of the operational risks that may directly impact their investments, including risks from portfolio concentration, illiquidity, hacking, digital asset custody, and digital asset valuations. Operational due diligence reviews of funds and fund managers are critical in assessing operational risks for digital asset investment.

**Part II. Types of Cryptoassets.** This part consists of Chapters 4–8, examining different types of cryptoassets: cryptocurrencies, security tokens, utility tokens, stablecoins, and tokenized securities.

**Chapter 4 – *Cryptocurrencies (Lennart Ante)*.** This chapter introduces the concept of cryptocurrencies such as bitcoin, ether, or litecoin. The chapter describes the history of cryptocurrency, blockchain technology, and the quest for secure digital money, followed by a discussion of cryptocurrency as a phenomenon. Next, it discusses individual cryptocurrencies, including an overview of bitcoin and relevant subgroups, such as so-called forks or privacy coins. It also explains developments such as stablecoins or central bank digital currencies, which are potentially much more in line with bitcoin's original idea of digital cash. The chapter provides a basic understanding of cryptocurrencies, their defining characteristics, challenges, and markets.

**Chapter 5 – *Security Tokens (Paul P. Momtaz)*.** This chapter synthesizes the economics, law, and technology of security tokens and security token offerings (STOs). Security tokens are an increasingly important instrument in decentralized finance (DeFi) markets. They are blockchain-based investment contracts that are subject to securities law. Interoperability, fractional ownership, market liquidity, and rapid settlement are the main reasons for considering security tokens a primary catalyst for digitizing finance. The chapter empirically compares STOs with initial exchange offerings (IEOs) and initial coin offerings (ICOs). STOs take longer and raise more funding. However, controlling for other factors, the amount raised in STOs and IEOs is lower than in utility token ICOs. These findings suggest an avenue for future research. Moreover, both the law and the technology of security tokens need to address critical challenges related to the competent jurisdiction in multinational activities and blockchain interoperability, scalability, and natural resource degradation.

**Chapter 6 – *Utility Tokens (Hugo Benedetti, Christian Caceres, and Álvaro Abarzúa)*.** Utility tokens are digital currencies that serve as the only accepted means of payment for services and products provided through a blockchain-based platform. They finance the development of their product or service, reward and incentivize early adopters and network promoters, align economic incentives between supply, demand, and the marketplace, and enhance network

effects among all participants. Their tokenomic design consists of the rules and regulations governing a token's issuance, distribution, allocation, and potential destruction. The chapter describes utility tokens, compares them with other types of cryptoassets, and discusses their value creation process and role in network economics. It also reviews standard tokenomic designs, discusses different regulatory approaches, and provides examples of current utility token applications in decentralized applications such as DeFi and virtual reality platforms (metaverses).

**Chapter 7 – Stablecoins (Ingo Fiedler and Lennart Ante).** This chapter introduces the concept of stablecoins such as Tether, DAI, or Ampleforth. It also provides a taxonomy of the different types of stablecoins consisting of (1) traditional asset-backed stablecoins, (2) crypto-collateralized stablecoins, and (3) algorithmic stablecoins and seigniorage shares. The chapter continues with a brief history of stablecoins, starting from BitShares as the first stablecoin implementation over Tether and market-wide stablecoin adoption to Facebook-initiated Diem. Next, the chapter explains the impact of stablecoins on cryptocurrencies and other markets and discusses trends and challenges facing stablecoins. The chapter provides a basic understanding of stablecoins, their defining characteristics, challenges, and markets.

**Chapter 8 – Tokenized Assets and Securities (Hugo Benedetti and Gabriel Rodríguez-Garnica).** Tokenization is a relatively new activity in digital finance. Developers can enhance the standard features and characteristics of assets and securities by tokenization, a process that creates a blockchain representation of the underlying instrument. Asset and security tokenization produces benefits. These benefits include reducing issuance and trading costs, lessening dependency on intermediaries, facilitating more liquidity in markets, and providing greater transparency around an asset's lifecycle for all parties involved. This chapter synthesizes the key characteristics, benefits, processes, tools, and techniques of tokenizing real-world assets. It also provides examples of current asset-backed token applications to help understand the rapidly growing industry and analyzes future expectations of this new technology.

**Part III. Cryptoassets as Investment Opportunities.** The third part contains Chapters 9–14, discussing cryptoasset products, decentralized finance, blockchain and crypto exchange-traded funds, cryptocurrency valuation, cryptoassets in a portfolio context, and cryptoasset frauds.

**Chapter 9 – A Comparative Review of Cryptoasset Products (Kristin M. Kalish, Kerem Proulx, and Andrew C. Spieler).** Cryptoassets are an asset class recorded digitally that does not represent a financial claim or liability for an issuer or a custodian. This chapter provides a detailed review of various cryptoassets by comparing different characteristics, products, and listing exchanges and discusses criticisms of the crypto ecosystem. It also discusses cryptoasset features, methods of tokenization, and advances in decentralized, peer-to-peer exchanges. Another topic examined is the criticisms of cryptoasset exchanges and ongoing regulatory implications due to cryptocurrency's open-source nature. The chapter evaluates various types and trends of cryptoassets, including currency, utility, platform, and transactional tokens

**Chapter 10 – Decentralized Finance (Kiran Pandian, Daniel Pfeiffer, and Samson Qian).** One aspect of the opportunities and challenges for cryptoassets concerns DeFi. DeFi is a growing area of cryptoassets that couples blockchain technology, digital assets, and financial services. DeFi is a publicly available system on a decentralized blockchain network, offering financial products and applications. This chapter provides an overview of the DeFi universe with massive potential in various industries in the global market. It also discusses the implications of DeFi’s new wave and its applications involving ICOs and stablecoins and specific challenges like the scalability trilemma in DeFi and financial markets.

**Chapter 11 – Blockchain and Crypto Exchange-traded Funds (Philip C. Sookram).** This chapter examines the current state of crypto exchange-traded funds (ETFs). It focuses on issues preventing wider implementation and specific products. ETFs have become a popular investment vehicle that investors use to help achieve their long-term goals. A recurring theme is that regulators protect individual investors from exposure to cryptocurrency, which can be a highly speculative investment. Pressure from institutions and investors for a bitcoin-based ETF made progress in 2021 when Proshares, an ETF specialized investment company, debuted the first-ever bitcoin futures ETF in the United States. This event is the first-time investors could buy a fund on the New York Stock Exchange that tracks derivative futures contracts of bitcoin. This occurrence pushed this digital asset’s spot price to all-time highs, serving as a breakthrough in cryptocurrency history.

**Chapter 12 – Approaches to Cryptocurrency Valuation (Arman Eshraghi).** Cryptocurrencies are notoriously tricky to value from a fundamental perspective. This valuation challenge is rooted in various debated issues in academia and the investments industry. For example, do cryptocurrencies and other cryptoassets have intrinsic value in the conventional sense? Can one appropriately regard cryptocurrencies as digital fiat currencies? What distinguishes cryptocurrencies such as bitcoin and ether from precious metals like gold from a financial perspective? How do cryptocurrencies compare to other cryptoassets in terms of pricing and valuation? This chapter answers these questions, discusses approaches to valuing cryptoassets, and identifies areas for future research.

**Chapter 13 – Cryptoassets in a Portfolio Context (Robinpreet Dhillon and Ehsan Nikbakht).** Since the inception of modern portfolio theory, traditional asset classes have been the standard investment products for portfolio construction. With the introduction of cryptoassets, including cryptocurrencies, tokenized securities, smart contracts, and blockchain-based token assets, the crypto “revolution” created a new asset class for consideration in a modern portfolio. This chapter explains cryptoassets in a portfolio, including their limitations and parameters as an asset class in a diversified portfolio. Finally, it reports an improvement in a new portfolio’s reward/risk ratio using the Sharpe ratio when adding cryptoassets to simulated equity, bonds, and real estate portfolios. A caveat is that a cryptoasset’s contribution to a well-diversified traditional portfolio differs from the performance of investing in a single and isolated cryptoasset.

**Chapter 14 – Protection of Portfolios and Financial Consumers from Cryptoasset Frauds (Ibrahim E. Sancak).** This chapter introduces the fundamentals of
