

GENERAL INFORMATION

| Course information | |
|--------------------|--|
| Name | Operations Management |
| Code | DOI-MBA-611 |
| Degree | Máster en Ingeniería Industrial (MII), Máster en Ingeniería de Telecomunicación (MIT), Máster in Business Administration (MBA) |
| Year | 2 nd |
| Semester | 1 st (Fall) |
| ECTS credits | 6 ECTS |
| Type | Basic |
| Department | Industrial Management |
| Area | Manufacturing |
| Coordinator | Pedro Sánchez Martín |

| Instructor | |
|--------------|---------------------------------|
| Name | Pedro Sánchez Martín |
| Department | Industrial Management |
| Area | |
| Office | D-409 |
| e-mail | pedro.sanchez @ comillas.edu |
| Phone | X 2349 |
| Office hours | Arrange an appointment by email |

| Instructor | |
|--------------|----------------------------------|
| Name | Enrique Ramírez Fernández |
| Department | Industrial Management |
| Area | |
| Office | |
| e-mail | enrique.ramirez @ ennomotive.com |
| Phone | |
| Office hours | Arrange an appointment by email |

DETAILED INFORMATION

| |
|--|
| Contextualization of the course |
| Contribution to the professional profile of the degree |
| <p>Operations management designs, operates, and improves productive systems—systems for getting work done. Operations managers are found in banks, hospitals, factories, and government. They design systems, ensure quality, produce products, and deliver services. To perform these activities they work with customers and suppliers. They solve problems, reengineer processes, innovate and integrate to improve quality, speed-to-market, customization, or low cost. To get excellence in operations is critical to a firm’s success.</p> <p>More specifically, the contributions of this course to the professional profile are the following:</p> <ul style="list-style-type: none"> • Gaining an appreciation of the strategic importance of operations and supply chain management in a global business environment and to understand how operations relates to other business functions. • Being able to describe the impact of operations and supply chain management on other functions within a firm, as well as on the competitive position of the firm. Being aware of the global nature of operations and the complexity of supply chains. • Developing a working knowledge of the concepts and methods related to designing and managing operations and to create value along the supply chain: The basic steps involved in bringing a product to market from its design through production and delivery. • Learning a skill set for continuous improvement: The ability to conceptualize how systems are interrelated, to organize activities effectively, to analyze processes critically, to make decisions based on data, and to push for continual process improvement. |
| Prerequisites |
| <p>There are no prerequisites to attend this course. However, it is recommended to be familiar with the basic issues, capabilities, and limitations of the operations function. For instance, these concepts are learned in the course “Manufacturing and Production” of the first course of Máster en Ingeniería Industrial (MII) and Máster en Ingeniería de Telecomunicación (MIT).</p> |

CONTENTS

| |
|---|
| Contents |
| Theory |
| Chapter 1. Introduction to Operations Management |
| <ul style="list-style-type: none"> 1.1 Operations Function on Global context 1.2 Strategy and Operations |
| Chapter 2. Quality Management |
| <ul style="list-style-type: none"> 2.1 Perspectives of Quality 2.2 SPC Review and Acceptance Sampling 2.3 Role of Employees 2.4 Six Sigma 2.5 The Cost of Quality and its effect on Productivity 2.6 Certificates ISO 9000 |
| Chapter 3. Supply Chain Management (SCM) |
| <ul style="list-style-type: none"> 3.1 Global Supply Chain Factors: Location, Demand, Inventory, Sustainability and Costs 3.2 Location Analysis 3.3 Supply Chain Procurement and Distribution 3.4 Supply Chain uncertainty and inventory 3.5 Information Technology and SCM software |
| Chapter 4. Inventory Management |
| <ul style="list-style-type: none"> 4.1 Role of Inventory 4.2 Elements of Inventory Management 4.3 Demand Forecasting 4.4 Inventory Control Systems 4.5 Inventory Models |
| Chapter 5. Operations Planning |
| <ul style="list-style-type: none"> 5.1 Strategies for adjusting capacity 5.2 Aggregate Planning 5.3 Material Requirements Planning (MRP) 5.4 Scheduling 5.5 Capacity Requirements Planning (CRP) 5.6 Enterprise Resource Planning (ERP) |
| Chapter 6. Lean Systems |
| <ul style="list-style-type: none"> 6.1 Applied Lean Techniques 6.2 Lean Services |
| Practices |
| Practice 1. Bullwhip Effect |
| The student gets a real experience of the impact of demand uncertainty on inventory levels, costs and supply quality along the supply chain layers with fixed delivery times |
| Practice 2. Inventory Control Systems |
| The student analyzes how different inventory policies affect to the inventory levels, costs and supply quality along the supply chain layers with fixed delivery times. |
| Practice 3. Kanban Implementation |
| The student implements Kanban methodology to obtain a pull performance in a manufacturing system. Different Kanban parametrization are analyzed based on the throughput and make-span outputs. |

Competences and Learning Outcomes

Competences

General Competences

- | | |
|-------|---|
| CG4. | Implementation of Concepts and Theories to Companies to find new business opportunities obtaining long-term competitive advantages |
| CG 6. | Ethical Commitment at the enforcement of moral values and the ones of the company applied to ethical and corporate social responsibility dilemmas. |
| CG 8. | Critical thinking and argumentation consistent with the understanding of knowledge and the know-how of companies, their external context and their management practices |
| CG 9. | Autonomy to learn how to continue the process of enhancing the cognitive skills and the relevant knowledge applied to the professional and business activity. |

Learning outcomes:

- | | |
|--------|--|
| RA 1. | Interconnect concepts in a multilateral and transversely way |
| RA 2. | Identify the right concepts for each situation. |
| RA 3. | Determine the scope and usefulness of theoretical knowledge. |
| RA 4. | Assume of ethics and values associated to the performance of the professional career. |
| RA 5. | Pursue excellence in professional activities. |
| RA 6. | Assume a responsible attitude towards people, with the used means and resources. |
| RA 7. | Bear in mind the consequences that their activities and behaviours may affect to everyone else. |
| RA 8. | Identify, set and contrast hypothesis, variables and results in logical and critical way. |
| RA 9. | Review the options and alternatives with a critical thinking to allow discussion and argumentation of opposite opinions. |
| RA 10. | Develop their assignments and tasks with initial instructions and a basic follow up |
| RA 11. | Search and find appropriate resources to justify their activities and reports. |
| RA 12. | Enlarge and deepen at the report development. |

TEACHING METHODOLOGY

| General methodological aspects | |
|--|---------------|
| <p>The best way of gaining a full understanding of Operations Management consists of showing and having real experiences on this topic. Consequently, all the proposed activities are focused on providing students real cases and practical experiences where implementation of operations management is essential for the improvement on company activities.</p> | |
| In-class activities | Competences |
| <ul style="list-style-type: none"> ▪ Lectures and problem-solving sessions (38 hours): The lecturer will introduce the fundamental concepts of each chapter, along with some practical recommendations, and will go through worked examples to support the explanation. Active participation will be encouraged by raising open questions to foster discussion and by proposing short application exercises to be solved in class. | CG4 |
| <ul style="list-style-type: none"> ▪ Case sessions (14 hours): Under the instructor's supervision, students, will apply the concepts and techniques covered in the lectures to real cases. | CG6, CG8, CG9 |
| <ul style="list-style-type: none"> ▪ Practice sessions (8 hours): Under the instructor's supervision, students, divided in small groups, will apply the concepts and techniques covered in the lectures to real problems. | CG9 |
| Out-of-class activities | Competences |
| <ul style="list-style-type: none"> ▪ Personal study of the course material and resolution of the proposed exercises (76 hours). | CG4, CG9 |
| <ul style="list-style-type: none"> ▪ Case session preparation to make the most of in-class time (28 hours). | CG6, CG8 |
| <ul style="list-style-type: none"> ▪ Practice session preparation to make the most of in-class time (16 hours). | CG9 |

ASSESSMENT AND GRADING CRITERIA

| Assessment activities | Grading criteria | Weight |
|-----------------------|--|--------|
| Mid-term exam | <ul style="list-style-type: none"> ▪ Understanding of the theoretical concepts. ▪ Application of these concepts to problem and case solving. ▪ Critical analysis of numerical exercises' results. | 20% |
| Final exam | <ul style="list-style-type: none"> ▪ Understanding of the theoretical concepts. ▪ Application of these concepts to problem and case solving. ▪ Critical analysis of numerical exercises' results. | 40% |
| Case Resolution | <ul style="list-style-type: none"> ▪ Class participation. ▪ Test Results (Pre and post discussion in class). | 25% |
| Practice Test | <ul style="list-style-type: none"> ▪ Class participation. ▪ Test Results (Pre and post practice). | 15% |

GRADING AND COURSE RULES

| Grading |
|---|
| <p>Regular assessment</p> <ul style="list-style-type: none"> ▪ Exams will account for 60%, of which: <ul style="list-style-type: none"> • Mid-term: 20% • Final exam: 40% • The <i>Exam global mark</i> is computed weighting one third the mid-term mark and two-thirds the final exam ▪ Cases and practices will account for the remaining 40%, of which: <ul style="list-style-type: none"> • Cases: 25% • Practices: 15% <p>In case that the <i>exam global mark</i> is equal or lower than 3.5, the final grade will be the <i>exam global mark</i>. Otherwise, the final grade is computed weighting the different marks as the previously shown percentages. In order to pass the course, the final grade should be greater or equal to 5.0.</p> |
| <p>Retakes</p> <p>Cases and practice marks will be preserved. The resulting grade will be computed as follows:</p> <ul style="list-style-type: none"> ▪ Final exam: 60% ▪ Cases: 25% ▪ Practices: 15% <p>In case that the final exam mark is equal or lower than 3.5, the final grade will be the final exam mark. Otherwise, the final grade is computed weighting the different marks as the previously shown percentages. In order to pass the course, the final grade should be greater or equal to 5.0.</p> |
| <p>Course rules</p> |

- Class attendance is mandatory according to Article 93 of the General Regulations (Reglamento General) of Comillas Pontifical University and Article 6 of the Academic Rules (Normas Academicas) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences:
 - Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period.

Students who commit an irregularity in any graded activity will receive a mark of zero in the activity and disciplinary procedure will follow (cf. Article 168 of the General Regulations (Reglamento General) of Comillas Pontifical University).

WORK PLAN AND SCHEDULE¹

| In and out-of-class activities | Date/Periodicity | Deadline |
|---|---|----------|
| Mid-term exam | Week 8 | |
| Final exam | May | |
| Practice sessions | Weeks 5, 7 11 and 13 | |
| Review and self-study of the concepts covered in the lectures | After each chapter | – |
| Problem-solving | After each chapter which requires problem solving | – |
| Practice preparation (Test) | Before every practice | – |
| Practice output analysis (Test) | Few days after every practice | – |
| Final exam preparation | May | – |

| STUDENT WORK-TIME SUMMARY | | | |
|---------------------------|---------------------|---------------------------------|----------------------|
| IN-CLASS HOURS | | | |
| Lectures | Problem-solving | Case sessions | Practices |
| 32 | 6 | 14 | 8 |
| OUT-OF-CLASS HOURS | | | |
| Self-study | Problem preparation | Case preparation and evaluation | Practice |
| 64 | 12 | 28 | 16 |
| ECTS credits: | | | 6 (180 hours) |

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the rhythm of the class.
