

GENERAL INFORMATION

Course information	
Name	Operations Management
Code	DOI-MBA-611
Degree	Máster en Ingeniería Industrial (MII), Máster en Ingeniería de Telecomunicación (MIT), Máster in Business Administration (MBA)
Year	2 nd
Semester	1 st (Fall)
ECTS credits	6 ECTS
Type	Basic
Department	Industrial Management
Area	Manufacturing
Coordinator	Pedro Sánchez Martín

Instructor	
Name	Sergio Cartagena Pelai
Department	Industrial Management
Area	
Office	
e-mail	scartagena@comillas.edu
Phone	
Office hours	Arrange an appointment by email

DETAILED INFORMATION

Contextualization of the course
Contribution to the professional profile of the degree
<p>Operations management designs, operates, and improves productive systems—systems for getting work done. Operations managers work in banks, hospitals, factories or government. They design systems, produce products, ensure their quality and deliver services. To perform these activities, they work with customers and suppliers. They solve problems, reengineer processes, innovate and integrate to improve quality, speed-to-market, customization or lower cost. To get excellence in operations is critical to a firm's success.</p> <p>More specifically, the contributions of this course to the professional profile are the following:</p> <ul style="list-style-type: none"> • Gaining an appreciation of the strategic importance of operations and supply chain management in a global business environment and to understand how operations relates to other business functions. • Being able to describe the impact of operations and supply chain management on other functions within a firm, as well as on the competitive position of the firm. Being aware of the global nature of operations and the complexity of supply chains. • Developing a working knowledge of the concepts and methods related to designing and managing operations and to create value along the supply chain: The basic steps involved in bringing a product to market from its design through production and delivery. • Learning a skill set for continuous improvement: The ability to conceptualize how systems are interrelated, to organize activities effectively, to analyze processes critically, to make decisions based on data, and to push for continual process improvement.
Prerequisites
<p>There are no prerequisites to attend this course. However, it is recommended to be familiar with the basic issues, capabilities, and limitations of the operations function. For instance, these concepts are learned in the course "Manufacturing and Production" of the first course of Máster en Ingeniería Industrial (MII) and Máster en Ingeniería de Telecomunicación (MIT).</p>

CONTENTS

Contents
Theory
Chapter 1. Introduction to Operations Management
1.1 Operations Function on Global context 1.2 Strategy and Operations
Chapter 2. Quality Management
2.1 Definition of Quality 2.2 Quality Tools 2.3 TQM & QMS 2.4 Six Sigma 2.5 The Cost of Quality and its effect on Productivity 2.6 ISO 9000
Chapter 3. Inventory Management
3.1 Role of Inventory 3.2 Elements of Inventory Management 3.3 Demand Forecasting 3.4 Inventory Control Systems 3.5 Inventory Models
Chapter 4. Supply Chain Management (SCM)
4.1 The Management of Supply Chains 4.2 Green Supply Chain s- Sustainability 4.3 Distribution 4.4 Transportation 4.5 Information Technology: A Supply Chain Enabler 4.6 Supply Chain Integration 4.7 Measuring Supply Chain Performance
Chapter 5. Operations Planning
5.1 Strategies for adjusting capacity 5.2 Aggregate Planning 5.3 Material Requirements Planning (MRP) 5.4 Scheduling 5.5 Capacity Requirements Planning (CRP) 5.6 Enterprise Resource Planning (ERP)
Chapter 6. Lean Systems
6.1 Basic Elements of Lean Production 6.2 Elements of Lean Production 6.3 Lean Six Sigma 6.4 Value Stream Mapping
Practices
Practice 1. Quality Acceptance Tests
The student gets a real experience of how a proper quality acceptance test allows defect identification. By means of several individual samplings they can confirm if the tolerance level is properly designed and understand the risks associated.
Practice 2. Bullwhip Effect
The student gets a real experience of the impact of demand uncertainty on inventory levels, costs and

supply quality along the supply chain layers with fixed delivery times

Practice 3. Sales & Operational Planning

The student by means of a role play can understand the different perspectives and interests each function brings to the monthly S&OP game plan where a consensus is needed.

Practice 4. Value Stream Mapping

In small groups the students must document, analyze and improve the flow of information or materials required to produce a simulated product for a customer.

Competences and Learning Outcomes

Competences

General Competences

- CG2. Manage data and information as key components to make decisions and identify, formulate and solve company problems
- CG 4. Implementation of Concepts and Theories of Companies to find new business opportunities obtaining long-term competitive advantages
- CG 6. Ethical Commitment at the enforcement of moral values and the ones of the company applied to ethical and corporate social responsibility dilemmas.
- CG 8. Critical thinking and argumentation consistent with the understanding of knowledge and the know-how of companies, their external context and their management practices
- CG 9. Autonomy to learn how to continue the process of enhancing the cognitive skills and the relevant knowledge applied to the professional and business activity.

Learning outcomes:

- RA 1. Interconnect concepts in a multilateral and transversely way
- RA 2. Identify the right concepts for each situation.
- RA 3. Determine the scope and usefulness of theoretical knowledge.
- RA 4. Assume of ethics and values associated to the performance of the professional career.
- RA 5. Pursue excellence in professional activities.
- RA 6. Assume a responsible attitude towards people, with the used means and resources.
- RA 7. Bear in mind the consequences that their activities and behaviours may affect to everyone else.
- RA 8. Identify, set and contrast hypothesis, variables and results in logical and critical way.
- RA 9. Review the options and alternatives with a critical thinking to allow discussion and argumentation of opposite opinions.
- RA Develop their assignments and tasks with initial instructions and a basic follow up
- RA Search and find appropriate resources to justify their activities and reports.
- RA Enlarge and deepen at the report development.

TEACHING METHODOLOGY

General methodological aspects	
<p>The best way of gaining a full understanding of Operations Management consists of showing and having real experiences on this topic. Consequently, all the proposed activities are focused on providing students real cases and practical experiences where implementation of operations management is essential for the improvement on company activities.</p>	
In-class activities	Competences
<ul style="list-style-type: none"> ▪ Lectures and problem-solving sessions (40 hours): The lecturer will introduce the fundamental concepts of each chapter, along with some practical recommendations, and will go through worked examples to support the explanation. Active participation will be encouraged by raising open questions to foster discussion and by proposing short application exercises to be solved in class. 	CG4
<ul style="list-style-type: none"> ▪ Case sessions (12 hours): Under the instructor's supervision, students, will apply the concepts and techniques covered in the lectures to real cases. 	CG6, CG8, CG9
<ul style="list-style-type: none"> ▪ Practice sessions (8 hours): Under the instructor's supervision, students, divided in small groups, will apply the concepts and techniques covered in the lectures to real problems. 	CG9
Out-of-class activities	Competences
<ul style="list-style-type: none"> ▪ Personal study of the course material and resolution of the proposed exercises (86 hours). 	CG4, CG9
<ul style="list-style-type: none"> ▪ Case session preparation to make the most of in-class time (28 hours). 	CG6, CG8
<ul style="list-style-type: none"> ▪ Practice session preparation to make the most of in-class time (6 hours). 	CG9

ASSESSMENT AND GRADING CRITERIA

Assessment activities	Grading criteria	Weight
Mid-term exam	<ul style="list-style-type: none"> ▪ Understanding of the theoretical concepts. ▪ Application of these concepts to problem and case solving. ▪ Critical analysis of numerical exercises' results. 	15%
Final exam	<ul style="list-style-type: none"> ▪ Understanding of the theoretical concepts. ▪ Application of these concepts to problem and case solving. ▪ Critical analysis of numerical exercises' results. 	40%
Business case Discussion	<ul style="list-style-type: none"> ▪ Class participation. ▪ Test Results (Pre-and post-discussion in class). 	15%
Business case Preparation	<ul style="list-style-type: none"> ▪ Case preparation ▪ On class presentation 	15%
Practice Test	<ul style="list-style-type: none"> ▪ Class participation. ▪ Test Results (Pre-and post-practice). 	15%

GRADING AND COURSE RULES

Grading
Regular assessment
<ul style="list-style-type: none"> ▪ Exams will account for 55%, of which: <ul style="list-style-type: none"> • Mid-term: 15% • Final exam: 40% • The <i>Exam global mark</i> is computed weighting proportionally each exam. ▪ Cases and practices will account for the remaining 45%, of which: <ul style="list-style-type: none"> • Business Cases: 30% • Practices: 15% <p>In case that the <i>exam global mark</i> is equal or lower than 3.5, the final grade will be the <i>exam global mark</i>. Otherwise, the final grade is computed weighting the different marks as the previously shown percentages. To pass the course, the final grade should be greater or equal to 5.0.</p>
Retakes
<p>Cases and practice marks will be preserved. The resulting grade will be computed as follows:</p> <ul style="list-style-type: none"> ▪ Final exam: 55% ▪ Cases: 30% ▪ Practices: 15% <p>In case that the final exam mark is equal or lower than 3.5, the final grade will be the final exam mark. Otherwise, the final grade is computed weighting the different marks as the previously shown percentages. To pass the course, the final grade should be greater or equal to 5.0.</p>
Course rules

- Class attendance is mandatory according to Article 93 of the General Regulations (Reglamento General) of Comillas Pontifical University and Article 6 of the Academic Rules (Normas Academicas) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences:
 - Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period.

Students who commit an irregularity in any graded activity will receive a mark of zero in the activity and disciplinary procedure will follow (cf. Article 168 of the General Regulations (Reglamento General) of Comillas Pontifical University).

WORK PLAN AND SCHEDULE¹

In and out-of-class activities	Date/Periodicity
Mid-term exam	Week 7 (14 th to 18 th Oct)
Final exam	December (10 th to 20 th)
Practice sessions	Weeks 4, 6 and 11 and 14 (Approx.)
Review and self-study of the concepts covered in the lectures	After each chapter
Problem-solving	After each chapter that contents problem solving
Practice output analysis (Test when required)	Just right after every practice
Final exam preparation	December

STUDENT WORK-TIME SUMMARY			
IN-CLASS HOURS			
Lectures	Problem-solving	Case sessions	Practices
38	2	12	8
OUT-OF-CLASS HOURS			
Self-study	Problem preparation	Case preparation and evaluation	Practice
82	4	24	8
ECTS credits:			6 (180 hours)

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the rhythm of the class.
