

GENERAL INFORMATION

Course information	
Name	Electric Power Systems
Code	MEPI-512
Degree	Official Master's Degree in the Electric Power Industry (MEPI)
Year	1 st
Semester	Fall
ECTS credits	6 ECTS
Type	Compulsory
Department	Electrical Engineering
Area	Power Systems
Coordinator	Luis Rouco Rodríguez

Instructor	
Name	Damián Laloux Dallemagne
Department	Electrical Engineering
Office	D-513 bis (Alberto Aguilera, 25)
e-mail	dlaloux@comillas.edu
Phone	91 5422800 (Ext. 2405)
Office hours	Arrange an appointment by email

Instructor	
Name	Michel Rivier Abbad
Department	Electrical Engineering
Office	D-504 (Sta. Cruz de Marcenado, 26)
e-mail	michel@comillas.edu
Phone	91 5406111
Office hours	Arrange an appointment by email

Instructor	
Name	Luis Rouco Rodriguez
Department	Electrical Engineering
Office	D-103 (Francisco de Ricci, 3)
e-mail	rouco@comillas.edu
Phone	91 5406109
Office hours	Arrange an appointment by email

DETAILED INFORMATION

Contextualization of the course
Contribution to the professional profile of the degree
<p>The objective of the course is for the student to become knowledgeable about physical and functional structure of electric power systems and to be familiar with the methods to analyze and control electric power systems. In particular, the specific objectives are:</p> <ul style="list-style-type: none"> • To understand the physical and functional structure of electric power systems • To be able to analyze DC, single phase and three-phase AC circuits • To understand the main control systems (load-frequency and voltage) of electric power systems and to analyze using appropriate mathematical models the performance of these control systems • To understand the steady-state models of electric power systems (power flow problem) and to solve power flow problems using different approaches and models
Prerequisites
Students willing to take this course should have taken courses in linear algebra and calculus

CONTENTS

Contents
Part I: Introduction to Power Systems
Chapter 1. Physical and Functional Structure of Electric Power Systems
<ul style="list-style-type: none"> 1.1 Demand 1.2 Generation 1.3 Transmission and Distribution 1.4 Market Operation and System Operation 1.5 Retailing
Chapter 2. Functional Description of Electric Power Systems
<ul style="list-style-type: none"> 2.1 Time Scales 2.2 Expansion Planning 2.3 Operation Planning 2.4 Operation 2.5 Supervision and Control 2.6 Protection
Chapter 3. Future Trends
<ul style="list-style-type: none"> 3.1 New Transmission and Distribution Technologies 3.2 Integration of Renewable Energy Sources 3.3 Smart Grids
Chapter 4. Power System Basic Analysis Tools
<ul style="list-style-type: none"> 4.1 DC Circuits Review 4.2 Single-phase AC Circuits Review 4.3 Three-phase AC Systems 4.4 Per unit magnitudes

Part II: Technical Analysis of Power Systems
Chapter 5. Frequency Control
5.1 Principles of Control Systems 5.2 Principles of Frequency Control 5.3 Primary Regulation 5.4 Secondary and Tertiary Regulation
Chapter 6. Voltage Control
6.1 Principles of Voltage Control 6.2 Voltage Control of Transmission Lines 6.3 Voltage control by generator excitation 6.4 Voltage control by ULTC transformers
Chapter 7. Power Flow
7.1 Models of power system components 7.2 Network model 7.3 Formulation of the power flow problem 7.4 Solution by Newton's method 7.5 Power flow solution with control means 7.6 Fast decoupled load flow 7.7 DC load flow 7.8 Contingency analysis by DC load flow 7.9 Optimal load flow
Laboratory
Laboratory session # 1. Frequency control
Load regulation. Primary regulation. Secondary regulation. Computer laboratory
Laboratory session # 2. Voltage control
Voltage control of a synchronous generator at open circuit. Voltage control of a synchronous generator connected to an infinite grid by excitation control and by transformer tap control. Electric machines laboratory
Laboratory session # 3. Power flow
AC power flow data structure and solution. Generator voltage control. Contingency analysis. Optimal power flow. Computer laboratory

Competences and Learning Outcomes
Competences
General Competences / Basic Competences
CG01. Haber adquirido conocimientos avanzados y demostrado, en un contexto de investigación científica y tecnológica o altamente especializado, una comprensión detallada y fundamentada de los aspectos teóricos y prácticos y de la metodología de trabajo en uno o más campos de estudio.
Specific Competences
CE01. Tener una visión general de la estructura y funcionamiento de los sistemas de energía eléctrica, así como de cuáles son las tendencias futuras desde la perspectiva tecnológica en los sistemas de energía eléctrica.
CE02. Conocer los modelos de los componentes del sistema de energía eléctrica (generadores, transformadores y líneas) y de las técnicas apropiadas para el análisis de los sistemas eléctricos en régimen permanente y transitorio.
Learning outcomes
By the end of the course students should be able to:
LO1. Understand the importance of the physical structure of electric power systems
LO2. Understand the importance of the functional structure of electric power systems
LO3. Be able to analyze DC, single-phase and three-phase AC circuits
LO4. Understand the mechanisms of frequency control of electric power systems and its implementation details
LO5. Understand the mechanisms of voltage control of electric power systems and its implementation details
LO6. Understand the rationale of power flows in electric power systems
LO7. Run power flow simulations

TEACHING METHODOLOGY

General methodological aspects	
<p>This course will provide the students with basic concepts and tools they will require in the following courses. To obtain a good understanding of the different concepts, it is necessary to combine theory and practice. As the students will have to assimilate a wide range of knowledge in a short period of time, their commitment will be essential as well.</p>	
In-class activities	Competences
<p>Lectures (54 hours): Presentation of the theoretical concepts by the instructors with proven experience in the power sector. These lectures will include dynamic presentations, case studies, and the participation and interaction with students.</p>	<p>CG01, CE01, CE02</p>
<p>Laboratory sessions (6 hours): Under the instructor's supervision, students will apply the concepts and techniques covered in the lectures. The sessions will take place in a computer laboratory.</p>	<p>CG01, CE01, CE02</p>
Out-of-class activities	Competences
<p>Personal study of the material (90 hours): This is an individual activity by the students, in which they will read, analyze and question the readings provided as background material, and that will be discussed with other students and lecturers in the classroom.</p>	<p>CG01, CE01, CE02</p>
<p>Individual term papers (20 hours): Learning activities that will be carried out individually, outside of the classroom.</p>	<p>CG01, CE01, CE02</p>
<p>Tutoring (10 hours): for groups or individual students, will be organized upon request.</p>	<p>CG01, CE01, CE02</p>

ASSESSMENT AND GRADING CRITERIA

Assessment activities	Grading criteria	Weight
Exams	<ul style="list-style-type: none"> Understanding of the theoretical concepts. Application of these concepts to problem-solving. 	90%
Reports	<ul style="list-style-type: none"> Application of theoretical concepts to real problem-solving. Interpretation and critical analysis of numerical results. Written communication skills. 	10%

GRADING AND COURSE RULES

The student has two periods of final evaluation during one academic year. The first one (regular assessment) will be carried out throughout the course. In case that this was not passed obtaining 5 or more points, the student has another opportunity of final evaluation (Retake) at the end of the academic year. The dates of retake evaluation period will be announced in the web page.

Grading
<p>Regular assessment</p> <p>Theory will account for 90% of the grade, of which:</p> <ul style="list-style-type: none"> 1st Exam: Power system structure & functional description up to medium term decisions (13/60) 2nd Exam: Functional description & DC-AC circuits & Three Phase Systems (13/60) 3rd Exam : Frequency control (10/60) 4th Exam: Voltage control (14/60) 5th Exam: Power flow (10/60) <p>The exams are a combination of a multi-option test and problems. Assignment reports will account for the remaining 10%. There are 3 assignments that the students must do individually following the instructions of the professor: frequency control, voltage control and power flow.</p>
<p>Retake</p> <p>A single retake final exam that will account for 90% of the grade. Assignment reports will account for the remaining 10%. There are 3 assignments that the students must do individually following the instructions of the professor: frequency control, voltage control and power flow.</p>
<p>Course rules</p> <p>Class attendance is mandatory according to Article 93 of the General Regulations (<i>Reglamento General</i>) of Comillas Pontifical University and Article 6 of the Academic Rules (<i>Normas Académicas</i>) of the ICAI School of Engineering. Not complying with this requirement may have the following consequences:</p> <ul style="list-style-type: none"> Students who fail to attend more than 15% of the lectures may be denied the right to take the final exam during the regular assessment period. Regarding laboratory, absence to more than 15% of the sessions can result in losing the right to take the final exam of the regular assessment period and the retake. Missed sessions must be made up for credit.

Students who commit an irregularity in any graded activity will receive a mark of zero in the activity and disciplinary procedure will follow (cf. Article 168 of the General Regulations (*Reglamento General*) of Comillas Pontifical University).

WORK PLAN AND SCHEDULE¹

In and out-of-class activities	Date/Periodicity	Deadline
First exam	7/10	
Second exam	28/10	
Third exam	18/11	
Fourth exam	16/12	
Fifth exam	20/01	
Lab sessions	Weeks 9, 12 and 15	
Review and self-study of the concepts covered in the lectures	After each lesson	–
Lab preparation	Before every session	–
Assignments		Between one and three weeks after the publication of the assignments (3)

STUDENT WORK-TIME SUMMARY			
IN-CLASS HOURS			
Lectures	Problem-solving	Lab sessions	Assessment
35	11	6	8
OUT-OF-CLASS HOURS			
Self-study	Problem-solving	Assignments	Tutoring
65	35	20	10
ECTS credits:			6 (180 hours + up to 10 hours for tutoring)

¹ A detailed work plan of the subject can be found in the course summary sheet (see following page). Nevertheless, this schedule is tentative and may vary to accommodate the rhythm of the class.

	IN-CLASS ACTIVITIES				OUT-OF-CLASS ACTIVITIES				LEARNING OUTCOMES
Week	h	LECTURE & PROBLEM SOLVING	LAB	ASSESSMENT	h	SELF-STUDY	LAB PREPARATION AND REPORTING	OTHER ACTIVITIES	Learning Outcomes
1	2	Intro to electric power systems			2	Review and self-study			LO1
1	2	Power Systems Structure: Demand			2	Review and self-study			LO1
2	2	Power Systems Structure: Generation			2	Review and self-study			LO1
2	2	Power Systems Structure: Transmission and Distribution,			2	Review and self-study			LO1
3	2	Functional description of power systems: two main organisational paradigms			2	Review and self-study			LO2
3	2	Functional description of power systems: long term decisions			2	Review and self-study			LO2
4	2	Functional description of power systems: medium term decisions			2	Review and self-study			LO2
4	1	Functional description of power systems: short term decisions			1	Review and self-study			LO2
4	1			Power System Structure & Functional description up to					LO1, LO2
5	1	Functional description of power systems: Future trends			1	Review and self-study			LO2
5	1	DC Circuits			1	Review, self-study and problem-solving			LO3
5	2	AC Circuits			2	Review, self-study and problem-solving			LO4
6	2	Three Phase Systems (part 1)			2	Review, self-study and problem-solving			LO4
6	2	Three Phase Systems (part 2)			2	Review, self-study and problem-solving			LO4
7	2	Frequency control: Principles of control systems			2	Review, self-study and problem-solving			LO5
7	2	Frequency control: Principles of frequency control			2	Review, self-study and problem-solving			LO5
8	2	Frequency control: Primary, secondary and tertiary regulation			2	Review, self-study and problem-solving			LO5
8	1	Functional description of power systems: Future trends			1	Review and self-study			LO2
8	1			Functional Description & DC-AC circuits & Three Phase Systems:					LO2, LO3, LO4
9	2		Frequency control: Computer laboratory session		5		Review, self-study and numerical simulation	Assignment on frequency control	LO5
9	2			Frequency control: Third exam					LO5
10	2	Voltage control: Principles of voltage control			2	Review, self-study and problem-solving			LO6
10	2	Voltage control: Principles of voltage control			2	Review, self-study and problem-solving			LO6
11	2	Voltage control: Voltage control of transmission lines			2	Review, self-study and problem-solving			LO6
11	2	Voltage control: Voltage control with generators			2	Review, self-study and problem-solving			LO6
